Brennan,1981 Many of the statistical techniques that have been used for developing and evaluating norm referenced tests are not applicable to criterion referenced tests CRTs and domain referenced tests DRTs since the data from these later tests do not usually follow the normal distribution Further CRTs and DRTs are not used to compare or rank students against one another rather they are used to determine whether students have met or exceeded mastery learning levels or absolute performance standards Statistical procedures are needed that can be easily employed by developers and evaluators of CRTs and DRTs in the Navy The purpose of this effort was to investigate errors of measurement in criterion referenced domain referenced and mastery testing A handbook of some statistical techniques for producing and evaluating DRTs was created for Navy practitioners This is a how to do it guide for the intelligent layman who develops and assesses DRTs and or CRTs This handbook considers item analysis procedures techniques for establishing cutting scores errors of measurement and clssification test length and advancement scores as well as group based coefficients of agreement   *Making, Choosing and Using Tests* ,1980   Criterion-referenced Measurement Ronald A.
