Electronics is an elementary text designed for basic instruction in electricity and electronics It gives emphasis on electronic
emission and the vacuum tube and shows transistor circuits in parallel with electron tube circuits This book also
demonstrates how the transistor merely replaces the tube with proper change of circuit constants as required Many
problems are presented at the end of each chapter This book is comprised of 17 chapters and opens with an overview of
electron theory followed by a discussion on resistance inductance and capacitance along with their effects on the currents
flowing in circuits under constant applied voltages Resistances inductances and capacitances in series and parallel are
considered The following chapters focus on impedance and factors affecting impedance electronics and electron tubes
semiconductors and transistors basic electronic circuits and basic amplifier circuits Tuned circuits basic oscillator circuits
and electronic power supplies are also described together with transducers antennas and modulators and demodulators This
monograph will serve as background training in theory for electronic technicians and as fundamental background for
students who wish to go deeper into the more advanced aspects of electronics **University of Colorado Bulletin** ,1954

medical and the health sectors at large Data intensive applications and services can provide better and more cost efficient
solutions with high impact for improved point of care solutions integrating health data from different sources tailored to the
specific health care needs of the individual thus helping to achieve better patient management and improved clinical
outcomes In Europe the relatively recent proposal for a regulation to set up the European Health Data Space aiming to

unleash the full potential of health data will open new opportunities for synergies and value co creation as part of high performance stakeholder driven ecosystems while also ensuring citizens to take control of their own health data With regard to this special Research Topic we consider health data spaces as cross institutional organizational and technical solutions for safe and secure health data exchange between different stakeholders for better health care and research
