Digital Signal Processing Bernard Mulgrew, Peter Grant, John Thompson, 2002-09-08. *Digital Signal Processing: Concepts and Applications*, second edition, covers the basic principles and operation of DSP devices. Its aim is to give the student the essentials of this mathematical subject in a form that can be easily understood and assimilated. The text concentrates on discrete systems starting from digital filters and discrete Fourier transforms. These are then extended into adaptive filters and spectrum analysers with the minimum of mathematical derivation, concentrating on demonstrating the performance which is achievable from these processors in communications and radar system applications. This new edition has been updated to include learning outcomes and summaries and provide more examples. The text has been completely redesigned and is presented in a clear and easy to read style. Key features: Self assessment questions within the text with answers provided. Numerous practical worked examples on processor design and performance simulation. MATLAB code for animated simulations available to students via World Wide Web access. This textbook is appropriate for undergraduate and MSc courses in signals and systems and signal processing and for professional engineers who wish to have a simple easy to read reference book on DSP techniques.

Digital Signal Processing Shlomo Engelberg, 2008-01-08. A mathematically rigorous but accessible treatment of digital signal processing that intertwines basic theoretical techniques with hands-on laboratory instruction is provided by this book. The book covers various aspects of the digital signal processing DSP problem. It begins with the analysis of discrete time signals and explains sampling and the use of the discrete and fast Fourier transforms. The second part of the book covering digital to analog and analog to digital conversion provides a practical interlude in the mathematical content before Part III lays out a careful development of the Z transform and the design and analysis of digital filters.
