Michaelian,2003-03-06 Photoacoustic infrared spectroscopy differs from traditional infrared spectroscopy in one important
way in its most common implementation a microphone is used to detect acoustic waves that result from absorption of
infrared radiation by a sample In other words no optical detector is required to quantify the amount of incident radiation
taken up by the sample This gas microphone method is one of a series of photoacoustic and photothermal techniques now
being used for characterization and analysis of solids liquids and gases Photoacoustic Infrared Spectroscopy represents the
most comprehensive resource on this important emerging technique Kirk Michaelian s trenchant study serves as both a text
and reference for a broad community of academic and industrial scientists conducting extensive research and applications in
photoacoustic infrared spectroscopy Chapters include Evolution of Photoacoustic Infrared Spectroscopy Experimental
Methods Depth Profiling Numerical Methods Applications of Photoacoustic Infrared Spectroscopy Quantitative Analysis
Special Topics Physicists chemists and spectroscopists in both academic and industrial laboratories polymer and organic
