

GENETICS

A. Organismal Reproduction

1. One of the most important requisites of all life, from the earliest life forms to present-day organisms, is **reproduction**.
2. Characteristics or traits of organisms must be passed on during reproduction.

B. Cellular Reproduction

1. Life as we know it is based on the **cell**, the basic unit of life.
2. Cell theory states all organisms are made up of cells and come from cells.

C. DNA

1. DNA (deoxyribonucleic acid) is the **molecule of inheritance** in ALL cellular forms of life.

D. Chromosomes

1. Eukaryotic cells possess nuclear DNA, with structural and enzymatic proteins, forming **chromatin**, which is visible as **chromosomes** during parts of the cell cycle.
2. Prokaryotic cells possess simpler DNA.
3. Sexually reproducing organisms typically have pairs of **homologous chromosomes** (look-alike chromosomes).

E. RNA

1. RNA (ribonucleic acid) is found in several forms, most of which are used in protein synthesis.
2. RNA is the **molecule of inheritance** in some viruses, which are not cell-based life forms.

F. Genes

1. Functional unit of inheritance and basis for most traits.
2. Located at fixed, or specific positions, on DNA, to be preserved and transmitted.
3. Control biological processes through production of proteins and RNA.

Basic Concepts

4. **Genotype** refers to the genetic composition of the organism.
5. **Phenotype** refers to the observable inherited traits (e.g., physical, behavioral, physiological characteristics) based on the inherited genotype.

Genes Form Basis of Inheritance

G. Ploidy

1. Homologous chromosome pairs have the same loci, thus genes.
2. When both chromosomes are present, for each gene there are two representatives; this is represented by the symbol $2n$ or **diploid** condition.
3. When only half of each homologous chromosome pair is present, such as in gametes, this is represented by the symbol n or **haploid**.

H. Alleles

1. Alternate forms of the same gene that could occupy the same locus (e.g., brown versus blue eye color).

2. **Homologous chromosomes** possess two representatives of each gene (i.e., $2n$).
3. **Homozygous** refers to the diploid condition where both alleles of the genotype are **identical** (e.g., AA, aa).
4. **Heterozygous** refers to the diploid condition where both alleles of the genotype are **different** (i.e., Aa).
5. **Dominant** alleles form a phenotypic expression regardless of the other allele on the matched chromosome of the homologous (e.g., "AA" or "Aa" genotypes will both express the phenotype designated by the "A" allele).
6. **Recessive** alleles fail to form a phenotypic expression unless the other allele on the matched chromosome is also recessive (e.g., "aa" genotype is the only way for the phenotype designated by the "a" allele to be expressed, assuming no other gene pairs influence inheritance [see epistasis discussion in Gene Action Categories, page 2]).
7. Additional types of allelic interactions will be discussed in subsequent sections.
8. **Determining gamete types:** Assuming there are no mutations, alleles present in gametes are determined by the diploid genotypes of parents.
 - a. For **homozygous** genotypes, **haploid** gametes will be identical for the given trait (i.e., AA individual would produce "A" gametes only; AaAa individual would produce "Aa" gametes only).
 - b. For **heterozygous** genotypes, **haploid** gametes will be **different** for the given trait (i.e., Aa individual would produce "A" & "a" gametes; AaBb individual would produce "AB, Ab, aB, ab" gametes—assuming two traits are considered [see Independent Assortment & Dihybrid Crosses, page 2]).

Mendelian Genetics

A. Gregor Mendel (1822–1884)

1. An Austrian monk who, through his love and interest in nature, developed the basic ideas of genetics long before chromosomes and genes (i.e., molecular biology) were discovered.
 - a. He developed his ideas by studying plants; in particular, his most famous work involved crosses with pea plant varieties.
2. His results and interpretations contrasted with a prevailing (at that time) theme of inheritance called "**blending**"—the concept that inherited traits mixed to create a composite characteristic in offspring.

B. Mendel's Genetics Laws

1. **Segregation of Alternate Factors**
2. **Monohybrid Crosses**
 - a. Specifically, Mendel discovered that with certain traits, there were individual plants which, if only crossed with other plants just like them, would almost always produce the exact same phenotype.
 - i. These individuals were called **true-breeders**.
 - ii. We now call this condition **homozygous**.
 - b. He also found that some individuals with similar appearance, when crossed, would not have all offspring of the same kind.
 - i. We now call this condition **heterozygous**.

- c. Mendel decided to systematically do single-trait crosses to determine the causes for the previously-stated observations.
 - d. Specifically, a parental generation (P) initiated these experimental crosses by using two true-breeding pea plants for opposite phenotypes (e.g., purple versus white flowers).
 - e. Offspring from this cross (F₁) all showed only one of the traits (e.g., purple flowers), and this trait was called the **dominant** trait.
 - f. Traits from the P generation "**did not blend**" in these F₁ individuals.
 - g. F₁ individuals, the **hybrids**, were cross-pollinated—the **monohybrid** cross—to produce F₂ individuals.
 - h. 1/2 of the F₂ individuals expressed the dominant trait, while 1/2 expressed the trait of the other P parent (e.g., white) that had not been expressed in the F₁ generation—this latter trait was the **recessive** form.
1. The expected phenotypic ratio of the F₂ individuals in monohybrid crosses would be 3:1.
 2. The expected genotypic ratio of the F₂ individuals in monohybrid crosses would be 2:1:1.
 3. The diagram at right, called a **Punnett square**, summarizes results of a single-trait cross similar to those done by Mendel on pea plants and other organisms.

Mendel's 1st Law: Segregation of Alternate Factors

1. Mendel concluded there had to be some physical entities or "**factors**" passed on by each parent of a cross.
 - i. We now know these to be **genes**.
 - ii. He also concluded that these factors came in pairs, which then became separated (in the production of gametes, which occurs during meiosis) and recombined during fertilization.
 - iii. The two P generation individuals had the factors in alternate form called **alleles** (e.g., purple versus white flowers).

Basic Genetics Student Guide:

Basic Genetics Student Guide: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous compelling novels enthralling the hearts of readers worldwide. Lets delve into the realm of bestselling books, exploring the engaging narratives that have charmed audiences this year. Basic Genetics Student Guide : Colleen Hoover's "It Ends with Us" This poignant tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can succeed. Basic Genetics Student Guide : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens' "Where the Crawdads Sing" This captivating coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and suspenseful novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
