Deciphering Science And Technology:

Understanding Girls Dale Rose Baker, 2016-07-25 *Understanding Girls* Quantitative and Qualitative Research is a retrospective of the author's research that led to receiving the 2013 Distinguished Contributions Award to Science Education through Research. This book includes selected articles that document changes in her research approaches and theoretical frameworks. The articles represent the evolution of her thinking about the issue of girls in science as well as her impact on science education. The author's work is placed in the context of science education research at the time of publication, research in education and psychology, and the culture of the times. She pulls back the curtain that often makes the messy work of research seem straightforward and linear to reveal why she did the research and the methodological decisions she faced. She describes the serendipitous nature of some of the work as well as her frustrations in trying to understand data and struggles to insure that she accurately and respectfully presented the voices of girls and their teachers. The book also includes some of the earliest research in engineering education preceding the focus on engineering practices found in the Next Generation Science and Engineering Standards. *Understanding Girls* provides insights into why girls may or may not decide to participate in science and engineering and what can be done to increase their participation. It provides evidence that we have increased girls' participation and the challenges that remain to insure that every girl who wants to become a scientist or engineer has the opportunity to do so. *Deciphering Science and Technology* Ian Varcoe, Maureen

McNeil, Steven Yearley, 1990 As science and technology have pervaded modern life to an ever greater degree, social scientists have been led to find questions of the causes and consequences of expert knowledge arising in places that would have been felt unlikely hitherto. Varcoe, McNeil, and Yearley's book assembles nine exemplary studies by sociologists, each of which explores an aspect of the current scientific/technological revolution. Some popular ideas are challenged. So too implicitly are certain large-scale social scientific theories claiming to have discerned in science and technology an overall meaning.

Interpreting Science at Museums and Historic Sites Debra A. Reid, Karen-Beth G. Scholthof, David D. Vail, 2023-09-11 Ask not what science can do for you but what public history can do for science. *Interpreting Science in Museums and Historic Sites* stresses the untapped potential of historical artifacts to inform our understanding of scientific topics. It argues that science gains ground when contextualized in museums and historic sites. Engaging audiences in conversations about hot topics such as health and medical sciences or climate change and responses to it mediated by a history museum can emphasize scientific rigor and the time lag between discovery and confirmation of societal benefit. *Interpreting Science* emphasizes the urgency of this work, provides a toolkit to start and sustain the work, shares case studies that model best practice, and resources useful to facilitate and sustain a science-infused public history. *The Technology Management Handbook* Richard C. Dorf, 1998-07-27 If you are not already in a management position, chances are you soon will be. According to the Bureau of Statistics, the fastest growing areas of employment for engineers are in engineering science.

Transdisciplinarity Basarab Nicolescu, 2008 In this fascinating volume the contributors make it very clear that far from being a faddish and superficial phenomenon transdisciplinarity is potentially the foundation for a new and much needed approach to inquiry Transdisciplinarity goes beyond the dualism of opposing binary pairs subject object subjectivity objectivity matter consciousness nature divine simplicity complexity reductionism holism diversity unity which have marked the history of ideas for millennia Because transdisciplinarity is radical in the sense that it goes to the roots of knowledge and questions our way of thinking and our construction and organization of knowledge It requires a discipline of self inquiry that integrates the knower in the process of knowing Nicolescu's vision of transdisciplinarity and that of the international contributors to this volume goes beyond cognitivism and the focus on analytic intelligence to propose a new type of intelligence that reflects a harmony between mind feelings and body
