during the first six months of life over 10 years Altogether achieving these targets would avert at least 3.7 million child deaths Every dollar invested in this package of interventions would yield between US \$4 and US \$35 in economic returns making investing in early nutrition one of the best value for money development actions Although some of the targets especially those for reducing stunting in children and anemia in women are ambitious and will require concerted efforts in financing scale up and sustained commitment recent experience from several countries suggests that meeting these targets is feasible These investments in the critical 1000 day window of early childhood are inalienable and portable and will pay lifelong dividends not only for children directly affected but also for us all in the form of more robust societies that will drive future economies
