## **Proceedings of the Ninth International Conference on Dependability and Complex Systems**

**DepCoS-RELCOMEX. June 30 - July 4, 2014, Brunów, Poland** Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2014-05-16 DepCoS RELCOMEX is an annual series of conferences organized by Wrocław University of Technology to promote a comprehensive approach to evaluation of system performance which is now commonly called dependability. In contrast to classic analyses which were concentrated on reliability of technical resources and structures built from them, dependability is based on a multi-disciplinary approach to theory, technology, and maintenance of a system, considered to be a multifaceted amalgamation of technical information, organization, software, and human users, administrators, supervisors, etc. Resources, diversity of processes being realized, data processing, system management, system monitoring, etc. their concurrency and their reliance on system intelligence often severely impedes construction of strict mathematical models and calls for application of intelligent and soft computing methods. This book presents the proceedings of the Ninth International Conference on Dependability and Complex Systems DepCoS RELCOMEX which took place in Brunów Palace, Poland, from 30th June to 4th July 2014. The articles selected for this volume illustrate the variety of topics that must be included in system dependability analysis: tools, methodologies, and standards for modelling, design, and simulation of the systems; security and confidentiality in information processing; specific issues of heterogeneous, today often wireless, computer networks or management of transportation networks.

### **Basic Statistics for Social Research** Robert A.

Hanneman, Augustine J. Kposowa, Mark D. Riddle, 2012-11-15 A core statistics text that emphasizes logical inquiry, not math. Basic Statistics for Social Research teaches core general statistical concepts and methods that all social science majors must master to understand and do social research. Its use of mathematics and theory are deliberately limited as the authors focus on the use of concepts and tools of statistics in the analysis of social science data rather than on the mathematical and computational aspects. Research questions and applications are taken from a wide variety of subfields in sociology, and each chapter is organized around one or more general ideas that are explained at its beginning and then applied in increasing detail in the body of the text. Each chapter contains instructive features to aid students in understanding and mastering the various statistical approaches presented in the book, including Learning objectives, Check quizzes after many sections, and an answer key at the end of the chapter. Summary, Key terms, End of chapter exercises, SPSS exercises in select chapters. Ancillary materials for both the student and the instructor are available and include a test bank for instructors and downloadable video tutorials for students.
