**Basic Values on Single Span Beams** Baum, Günter, Dipl. Bauing, 1965 *Basic Values on Single Span Beams* G. Baum, 2012-12-06 In keeping with the general trend towards rationalisation static calculations have of late also been programmed by electronic computers The number of problems which can be advantageously resolved in this way is however very limited as yet partly on account of the relatively high cost involved and partly due to the waiting time the statician must suffer after collecting together his data and finally because the programming possibilities of the computer are limited Nonetheless if static calculations have to be rationalised there is another way all beam structures whether they be continuous beams or frame constructions are arithmetically based on individual spans which are freely supported or fixed at the ends If the basic values for these can be ascertained quickly and accurately then a considerable part of the arithmetical work is already done It is the aim of this work to provide the statician with these values An attempt has been made to deal as comprehensively as possible with all the cases of loading likely to arise in practice Naturally one case or another is bound to happen more frequently whilst others are seldom encountered However this embracing programme is intended to make it possible for the user of this work after a brief familiarising period always to use the same arithmetical procedure the choice of the actual method being left to him *Basic Values on Single Span Beams: Tables for Calculating Continuous Beams and Frame Constructions, Including prestressed Beams* G.
