

DEDUCTIVE REASONING

Deductive reasoning is a logical process that involves drawing specific conclusions based on general principles or premises.

OVERVIEW

Deductive reasoning is a top-down approach to logical thinking where specific conclusions are derived from general principles or premises. It follows a structured format in which if the premises are true and the reasoning is valid, the conclusion must also be true. This type of reasoning is commonly used in mathematics, formal logic, and philosophical thinking.

EXAMPLE

Premise 1: All mammals have lungs.
Premise 2: Dolphins are mammals.
Conclusion: Dolphins have lungs.

In this example, the first premise establishes a general principle that all mammals have lungs. The second premise identifies dolphins as a specific mammal. Using deductive reasoning, we can logically conclude that dolphins must also have lungs.

Deductive Logic George William Joseph Stock,St George William Joseph Stock,2014-04-10

1 LOGIC is divided into two branches namely 1 Inductive 2 Deductive 2 The problem of inductive logic is to determine the actual truth or falsity of propositions the problem of deductive logic is to determine their relative truth or falsity that is to say given such and such propositions as true what others will follow from them 3 Hence in the natural order of treatment inductive logic precedes deductive since it is induction which supplies us with the general truths from which we reason down in our deductive inferences 4 It is not however with logic as a whole that we are here concerned but only with deductive logic which may be defined as The Science of the Formal Laws of Thought 5 In order fully to understand this definition we must know exactly what is meant by thought by a law of thought by the term formal and by science 6 Thought as here used is confined to the faculty of comparison All thought involves comparison that is to say a recognition of likeness or unlikeness 7 The laws of thought are the conditions of correct thinking

The term law however is so ambiguous that it will be well to determine more precisely in what sense it is here used
