Do It Write Math:

Do It Write Math, Grades 2-3 Toni Jones,1997-04 **How to Write Mathematics** Norman Earl Steenrod,1973-12-31
This classic guide contains four essays on writing mathematical books and papers at the research level and at the level of graduate texts The authors are all well known for their writing skills as well as their mathematical accomplishments The first essay by Steenrod discusses writing books either monographs or textbooks He gives both general and specific advice getting into such details as the need for a good introduction The longest essay is by Halmos and contains many of the pieces of his advice that are repeated even today In order to say something well you must have something to say write for someone think about the alphabet Halmos s advice is systematic and practical Schiffer addresses the issue by examining four types of mathematical writing research paper monograph survey and textbook and gives advice for each form of exposition Dieudonne s contribution is mostly a commentary on the earlier essays with clear statements of where he disagrees with his coauthors The advice in this small book will be useful to mathematicians at all levels **EBOOK: Raising Achievement in Secondary Mathematics** Anne Watson,2006-06-16 This book brings together research and professional knowledge to enhance the teaching of lower attaining students in secondary mathematics Attainment in mathematics is an important social issue since underachievement can make a difference to future life choices particularly amongst certain groups of students Raising Achievement in Secondary Mathematics shows how well meant teaching strategies and approaches can in practice exacerbate underachievement in maths by making inappropriate demands on learners As well as criticizing some of the teaching and grouping practices that are considered normal in many schools the book also offers an alternative view of attainment and capability based on real classroom incidents in which low attaining students show themselves to be able to think about mathematics in quite sophisticated ways The author argues that teaching could be based on learners proficiency rather than on correcting deficits in knowledge and behaviour She describes how a group of teachers who believed that their students could do better with higher expectations developed a range of principles and strategies to support their work the students showed significant progress and the teachers felt they were doing a better job With numerous case studies ideas and teaching strategies this book is for anyone who is teaching or learning to teach mathematics **The Principles of the Trinary Universe** Jeffrey Flesher, **The Mathematical Gazette** ,1914 *Children's Mathematics* Elizabeth Carruthers,Maulfry Worthington,2006-08-07 In Case Study 5 a grassroots Children s Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children s mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children s mathematics and the ways in which professionals can support and encourage the children s mathematical thinking and reasoning The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age Researching Effective

CPD in Mathematics Education RECME project NCETM 2009 The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism Section 115 features children s mathematical graphics and emphasises The role of mark making in children s cognitive development is set out in the taxonomy Carruthers and Worthington 2006 The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes The Williams Maths Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children s eyes by listening to and reflecting on the constant efforts made by children to make sense of their world This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout If you want to expand your understanding upwards and outwards then get a copy soon Times Educational Supplement I first read Children s Mathematics Making Marks Making Meaning a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers I m sure you will find it compelling reading too I think it has the potential to change in a fundamental way how we think about early mathematical development Lynne McClure Editor Math Co ordiator s File Mathematics Association In their exceptionally readable and informative book Children s Mathematics Making Marks Making Meaning Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics *The Mathematics Teacher* ,1911 Oxford, Cambridge, and Dublin Messenger of Mathematics ,1896 Annals of Mathematics ,1923 Founded in 1884 Annals of Mathematics publishes
