Early Plastic:

Early Plastics Sylvia Katz, 1994 It comes as a surprise to most people that plastics should have a history worth recording We have grown so used to the synthetic materials that surround us in everyday life that it is difficult to disassociate them from the twentieth century Early natural plastics were known and used by the ancient Egyptians and Chinese but it was in the mid nineteenth century that they became a commercial reality culminating in the patenting of the first truly synthetic plastic Bakelite in 1907 This book traces the development of plastics from their natural origins through semi synthetic moulding materials such as celluloid up to the earliest synthetics There is a brief guide to identifying and looking after plastics and a list of collections of historical plastics The chemical derivation of polymers is described and a simple glossary and a guide to the basic processes are included

Plastics Anne Gunnison, David Joselit, 2025-11-11 Why modern and contemporary art and art conservation can't be understood without taking account of the revolutionary impact of plastics Modern and contemporary art wouldn't exist without the invention of plastics From sculpture to paint and photography to film plastics have shaped every major medium of art In turn plastics have revolutionized art conservation transforming the possibilities of preservation but also producing new challenges for conservators struggling to preserve toxic and degrading material Hailed as utopian in the twentieth century plastics today are often understood as pollution and waste a central cause of ecological crisis *Plastics* is the first book to address the multifaceted history of plastics from the perspective of artists art historians conservators and environmental scientists *Plastics* demonstrates that this material cannot easily be summarized as toxic or utopian catastrophic or necessary Instead plastics define the modern world in both its possibility and failures The book also reveals how artists have been a critical overlooked voice in debates about plastics and how they have offered theories of the material through works that explore its potential and harmfulness Presenting a variety of perspectives on the world of plastics through the lens of art artmaking art history and art conservation *Plastics* shows why and how coming to terms with this material is critical to understanding not only modern and contemporary art and art conservation but also the crises of the twenty first century
