Encyclopedia of Marine Science C. Reid Nichols, Robert G. Williams, 2009 Presents an illustrated A Z encyclopedia with more than 600 entries providing information on topics related to marine science

New Natures Dolly Jørgensen, Finn Arne Jørgensen, Sara B. Pritchard, 2013-07-08 New Natures broadens the dialogue between the disciplines of science and technology studies STS and environmental history in hopes of deepening and even transforming understandings of human nature interactions The volume presents richly developed historical studies that explicitly engage with key STS theories offering models for how these theories can help crystallize central lessons from empirical histories facilitate comparative analysis and provide a language for complicated historical phenomena Overall the collection exemplifies the fruitfulness of cross disciplinary thinking The chapters follow three central themes ways of knowing or how knowledge is produced and how this mediates our understanding of the environment constructions of environmental expertise showing how expertise is evaluated according to categories categorization hierarchies and the power afforded to expertise and lastly an analysis of networks mobilities and boundaries demonstrating how knowledge is both diffused and constrained and what this means for humans and the environment Contributors explore these themes by discussing a wide array of topics including farming forestry indigenous land management ecological science pollution trade energy and outer space among others The epilogue by the eminent environmental historian Sverker Sorlin views the deep entanglements of humans and nature in contemporary urbanity and argues we should preserve this relationship in the future Additionally the volume looks to extend the valuable conversation between STS and environmental history to wider communities that include policy makers and other stakeholders as many of the issues raised can inform future courses of action

Naked Science Laura Nader, 2014-01-02 Naked Science is about contested domains and includes different science cultures physics molecular biology primatology immunology ecology medical environmental mathematical and navigational domains While the volume rests on the assumption that science is not autonomous the book is distinguished by its global perspective Examining knowledge systems within a planetary frame forces thinking about boundaries that silence or affect knowledge building Consideration of ethnoscience and technoscience research within a common framework is overdue for raising questions about deeply held beliefs and assumptions we all carry about scientific knowledge We need a perspective on how to regard different science traditions because public controversies should not be about a glorified science or a despicable science
