The Best of the Grammarians Francesca Schironi, 2018-10-31 A founding father of the art of philology Aristarchus of Samothrace 216 144 BCE made a profound contribution to ancient scholarship In his study of Homer s Iliad his methods and principles inevitably informed even reshaped his edition of the epic This systematic study places Aristarchus and his fragments preserved in the Iliadic scholia or marginal annotations in the context and cultural environment of his own time Francesca Schironi presents a more robust picture of Aristarchus as a scholar than anyone has offered previously Based on her analysis of over 4 300 fragments from his commentary on the Iliad she reconstructs Aristarchus methodology and its relationship to earlier scholarship especially Aristotelian poetics Schironi departs from the standard commentary on individual fragments and instead organizes them by topic to produce a rigorous scholarly examination of how Aristarchus worked Combining the accuracy and detail of traditional philology with a big picture study of recurrent patterns and methodological trends across Aristarchus work this volume offers a new approach to scholarship in Alexandrian and classical philology It will be the go to reference book on this topic for many years to come and will usher in a new way of addressing the highly technical work of ancient scholars without losing philological accuracy This book will be valuable to classicists and philologists interested in Homer and Homeric criticism in antiquity Hellenistic scholarship and ancient literary criticism

Untranslated Gene Regions and Other Non-coding Elements Lucy W. Barrett, Sue Fletcher, Steve D. Wilton, 2013-06-26 There is now compelling evidence that the complexity of

higher organisms correlates with the relative amount of non coding RNA rather than the number of protein coding genes Previously dismissed as junk DNA it is the non coding regions of the genome that are responsible for regulation facilitating complex temporal and spatial gene expression through the combinatorial effect of numerous mechanisms and interactions working together to fine tune gene expression The major regions involved in regulation of a particular gene are the 5 and 3 untranslated regions and introns In addition pervasive transcription of complex genomes produces a variety of non coding transcripts that interact with these regions and contribute to regulation This book discusses recent insights into the regulatory roles of the untranslated gene regions and non coding RNAs in the control of complex gene expression as well as the implications of this in terms of organism complexity and evolution
