Intelligence Mark Amerika, 2022-05-10 A series of intellectual provocations that investigate the creative process across the human nonhuman spectrum Is it possible that creative artists have more in common with machines than we might think Employing an improvisational call and response writing performance coauthored with an AI text generator remix artist and scholar Mark Amerika interrogates how his own psychic automatism is itself a nonhuman function strategically designed to reveal the poetic attributes of programmable worlds still unimagined Through a series of intellectual provocations that investigate the creative process across the human nonhuman spectrum Amerika critically reflects on whether creativity itself is at root a nonhuman information behavior that emerges from an onto operational presence experiencing an otherworldly aesthetic sensibility Amerika engages with his cyberpunk imagination to simultaneously embrace and problematize human machine collaborations He draws from jazz performance beatnik poetry Buddhist thought and surrealism to suggest that his own artificial creative intelligence operates as a finely tuned remix engine continuously training itself to build on the history of avant garde art and writing Playful and provocative My Life as an Artificial Creative Intelligence flips the script on contemporary AI research that attempts to build systems that perform more like humans instead self reflexively making a very nontraditional argument about AI s impact on society and its relationship to the cosmos

Intelligence and Human Abilities Colin Cooper, 2015-05-08 Choice Recommended Read Psychological research into human intelligence and abilities presents us with a number of difficult questions Are human abilities explained by a single

core intelligence or by multiple intelligences How should abilities be assessed With tests unlike the problems which people normally have to solve or with practical problems closer to those encountered in life school and work Do ability tests predict how a person will behave If so can they predict whether a person will succeed at school and at work Intelligence and Human Abilities critically evaluates research evidence from the past 100 years to consider these and other issues It shows that despite the apparent contradictions in this research the evidence in fact supports one coherent model a fact which has clear implications for researchers educators and test users This clear and engaging text provides an up to date evaluation of what the empirical evidence tells us about the number nature and origins of human abilities It will be essential reading for students and practitioners of psychology and education and also for users of ability tests such as applied psychologists and personnel managers
