

COPING WITH WORK RELATED HEAD INJURIES

Work-related head injuries can lead to physical, mental, and financial hardships for an employee. A work injury attorney can file a workers compensation claim and ensure that fair benefits are received.

COMMON WORKPLACE HEAD INJURIES

- According to the U.S. Bureau of Labor Statistics, over 3 million workers suffered non-fatal head injuries while on the job in 2014.
- Work-related head injuries are among the most serious type of non-fatal injury that a person can sustain, because they often have the potential to lead to long-term physical, mental, and financial problems.

A variety of accidents can cause work-related head injuries. Some of these include:

SLIP AND FALL ACCIDENTS

Slip and fall accidents are consistently among the most common causes of serious work-related head injuries.

These are often caused by:

Liquid spills

Cracked pavement

Inadequate lighting

Snow and ice

MOTOR VEHICLE ACCIDENTS

- Many employment positions require employees to drive motor vehicles as part of their daily duties.
- Truckers, delivery drivers and construction workers are especially vulnerable to accidents that can result in serious head injuries.

DEFECTIVE WORK EQUIPMENT

- In many cases, work-related head injuries are caused by defective work tools and equipment used in the workplace.
- When such injuries occur, a work injury attorney can file a lawsuit against the equipment manufacturer, as well as the employer.

EXPLOSIONS

- Certain industries such as industrial manufacturing and construction often use materials that have the potential to explode under certain conditions.
- Flying debris and falls due to the impact of the blast often cause head injuries.

COMPLICATIONS FROM HEAD INJURIES

Work-related head injuries can result in a variety of complications, their severity is proportional to the severity of the accident. Some of the more common complications associated with severe head injuries include:

Headaches and dizziness

Difficulty communicating

Sensitivity to light and sound

Speech and vision impairments

Balance problems

Sleep disturbances

Changes in behavior

Depression

Seizures

- Subdural hematomas, common in serious head injuries, result in bleeding between the brain and the inside of the skull.

- The increased accumulation of blood increases pressure on the brain and puts the injury victim at a higher risk of losing consciousness or death.

LONG-TERM CONSEQUENCES

- Work-related head injuries are often serious or fatal.
- Many injured employees require physical or mental rehabilitation before returning to work.
- With severe injuries, months or years may pass before the injured employee is able to fully recover from his/her injuries.
- Some injuries also result in partial or total permanent disability.
