Congress. House. Committee on Ways and Means,1978 *Company Law* Eva Micheler,2021 This book advances a real entity theory of company law In this theory the company is a legal entity allowing an organization to act autonomously in law and company law establishes procedures facilitating autonomous organizational decision making The theory builds on the insight that organizations or firms are a social phenomenon outside of the law and that they are autonomous actors in their own right They are more than the sum of the contributions of their participants and they act independently of the views and interests of their participants The real entity theory advanced in this book explains company law as it stands at a positive level Companies are liable in tort and crime The statute creates roles for shareholders directors a company secretary and auditors and so facilitates a process leading to organizational action The law also integrates the interests of creditors and stakeholders The book states the law as of 1 August 2021 Publications of the League of Nations ,1926 **The Fiscal Problem in Missouri** National Industrial Conference Board,1930 **Corporations** Larry D. Approaches to scaling small software companies without investors Carolin Nothof,2020-07-07 Master s Thesis from the year 2020 in the subject Business economics Information Management grade 1 3 University of Applied Sciences Kaiserslautern language English abstract Venture capital funded companies are far more present in the media than organically grown companies This makes us erroneously assume that there is only one way to building a successful company by raising VC venture capital The truth is however that only a tiny fraction of all small businesses obtains VC in the course of their life span In fact from all the companies aspiring to receive funding through VC 99% will never achieve this objective Among the 1% that does achieve funding there are companies that have to go out of business because they get overfunded and lose their focus Others recognize that entrepreneurs and investors have fundamentally different motivations especially regarding the exit Therefore growth oriented founders of tech companies wonder whether it is possible for them to scale without investors and how they can approach to do so This thesis aims to provide answers to these two questions primarily by investigating companies that have already scaled successfully and by extracting the main lessons from their growth journey
