Correctness Problem In Computer Science:

The Correctness Problem in Computer Science Robert S. Boyer, J Strother Moore, 1981 *The Correctness Problem in Computer Science* Robert S Boyer, J. Strother Moore, 1981 Constructive Methods in Computing Science Manfred Broy, 2012-12-06 Computing Science is a science of constructive methods The solution of a problem has to be described formally by constructive techniques if it is to be evaluated on a computer The Marktoberdorf Advanced Study Institute 1988 presented a comprehensive survey of the recent research in constructive methods in Computing Science Some approaches to a methodological framework and to supporting tools for specification development and verification of software systems were discussed in detail Other lectures dealt with the relevance of the foundations of logic for questions of program construction and with new programming paradigms and formalisms which have proven to be useful for a constructive approach to software development The construction specification design and verification especially of distributed and communicating systems was discussed in a number of complementary lectures Examples for those approaches were given on several levels such as semaphores nondeterministic state transition systems with fairness assumptions decomposition of specifications for concurrent systems in liveness and safety properties and functional specifications of distributed systems Construction methods in programming that were presented range from type theory the theory of evidence theorem provers for proving properties of functional programs to category theory as an abstract and general concept for the description of programming paradigms The Second Age of Computer Science Subrata Dasgupta, 2018 Between the genesis of computer science in the 1960s and the advent of the World Wide Web around 1990 computer science evolved in significant ways The author has termed this period the second age of computer science This book describes its evolution in the form of several interconnected parallel histories **Elegant Solutions to Computer Science Problems**, Readings in Artificial Intelligence and Software Engineering Charles Rich, Richard C. Waters, 2014-06-28 Readings in Artificial Intelligence and Software Engineering covers the main techniques and application of artificial intelligence and software engineering The ultimate goal of artificial intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically This book is organized into 11 parts encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has been designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The

concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable

Error-Free Software Robert L. Baber,1991-08 Demonstrates how formal mathematical methods of proving correctness can help decrease the incidence of design errors bugs in software development While all the techniques described here have a rigorous mathematical foundation it is omitted in favor of emphasizing practical applications

COMPASS ... ,1990 **The Spine of Software** Robert L. Baber,1987 Every engineering field is founded on a body of fundamental scientific and mathematical principles providing a basis for the design process and enabling designers to systematically validate the major characteristics of a proposed system In recent years computing science has generated a similar body of principles allowing software engineers to design error free programs This book presents this core of knowledge The concepts covered are based on the view that a variable is a triple of a name a set and an element of that set a value that a data environment the execution of a program is a sequence of variables and that a statement subprogram or program serves to map a data environment into another data environment While the material is treated in a mathematically rigorous fashion it is carefully written to show software developers how to apply theory to practical design tasks *The*

Boyer, J Strother Moore, 1998 This book provides the definitive documentation for one of the most well known and highly regarded theorem proving programs ever written The program described is one of the more significant enduring and prize awarded accomplishments in the fields of artificial intelligence formal methods and applied logic The book provides an exact statement of the logic for which the program is a prover a complete description of the user's commands installation instructions and much tutorial information including references to thousands of pages of examples Among the examples is a formally verified microprocessor and a formally verified compiler targeting that microprocessor The second edition of A Computational Logic handbook provides all the information necessary for using the most recently released version of Nqthm the freely available Boyer Moore theorem proving program The second edition includes a precise description of all recent changes to the logic in the past nine years including many enhanced syntactic features and rules of inference which were added to support work on large scale projects in formal methods Thousands of pages of fascinating exemplary mathematically checked input are described examples that deal with very difficult questions in formal methods and mathematics New material includes Description of the new syntax including COND CASE LET LIST and backquote describes some higher order inference procedures including constrained functions and functional instantiation documents more sophisticated control machinery for manipulating very large theories introduces a secure proof checking environment describes thousands of pages of fascinating example input dealing with very difficult questions in formal methods and mathematics provides a formal parser for the syntax compares the proof complexity of many interesting checked examples includes much new tutorial help especially for the many new features A computational logic is a mathematical logic that is both oriented towards discussion of computation and mechanised so that proofs can be checked by computation The computational logic discussed in the handbook is that developed by Boyer Moore The first edition published in 1988 is an acknowledged classic in the field of formal methods and computational logic However it no longer reflects existing technology The second edition provides a complete overview of the Boyer Moore theorem proving approach Nqthm and provides examples It includes several significant new features that have been added to the Nqthm system since 1988 The book is structured in the following way Part 1 discusses logic without regard for its mechanisation and answers the question what are the axioms and rules of inference Part 2 discusses its mechanisation and answers the question how does one use the Boyer Moore theorem prover to prove theorems **The Specification of Complex Systems** Bernard Cohen, William T.

Harwood, Melvyn I. Jackson, 1986 Presents a comparison of formal specification methods including algebraic specification state model specification using the Vienna development method VDM and the specification of concurrent systems using Milner's CCS
