DIFFERENTIAL CALCULUS

LIMIT OF A FUNCTION

➤ **Limit** $[f(x), x \rightarrow a, \text{Direction} \rightarrow 1]$ computes the **left hand limit** of the function $f(x)$ at the point $x = a$ i.e. the value of $\lim_{x \rightarrow a^-} f(x)$ will be computed.

Examples:

i) $\text{Limit}[(x^5 - 32)/(x^3 - 8), x \rightarrow 2, \text{Direction} \rightarrow 1]$
Ans: $\frac{20}{3}$.

ii) $f[x_-] = 1/x$
 $\text{Limit}[f(x), x \rightarrow 0, \text{Direction} \rightarrow 1]$
Ans: $-\infty$.

➤ **Limit** $[f(x), x \rightarrow a, \text{Direction} \rightarrow -1]$ computes the **right hand limit** of the function $f(x)$ at the point $x = a$ i.e. the value of $\lim_{x \rightarrow a^+} f(x)$ will be computed.

Examples:

i) $\text{Limit}[(x^5 - 32)/(x^3 - 8), x \rightarrow 2, \text{Direction} \rightarrow -1]$
Ans: $\frac{20}{3}$.

ii) $f[x_+] = 1/x$
 $\text{Limit}[f(x), x \rightarrow 0, \text{Direction} \rightarrow -1]$
Ans: $+\infty$.

➤ **Limit** $[f(x), x \rightarrow a]$ computes the **limit** of the function $f(x)$ at the point $x = a$ i.e. the value of $\lim_{x \rightarrow a} f(x)$ will be computed.

Examples:

i) $\text{Limit}[(x^5 - 32)/(x^3 - 8), x \rightarrow 2]$
Ans: $\frac{20}{3}$.

ii) $f[x] = 1/x$
 $\text{Limit}[f(x), x \rightarrow 0]$
Ans: ∞ .

Problem-1: Suppose $f(x) = \frac{x^5 - 32}{x^3 - 8}$ is a function.

- i) Find the left hand limit of the function $f(x)$ at $x = 2$ i.e. find $\lim_{x \rightarrow 2^-} f(x)$
ii) Find the right hand limit of the function $f(x)$ at $x = 2$ i.e. find $\lim_{x \rightarrow 2^+} f(x)$

Calculus Mathematica:

Calculus Using Mathematica K.D. Stroyan, 2014-05-10 Calculus Using Mathematica is intended for college students taking a course in calculus It teaches the basic skills of differentiation and integration and how to use Mathematica a scientific software language to perform very elaborate symbolic and numerical computations This is a set composed of the core text science and math projects and computing software for symbolic manipulation and graphics generation Topics covered in the core text include an introduction on how to get started with the program the ideas of independent and dependent variables and parameters in the context of some down to earth applications formulation of the main approximation of differential calculus and discrete dynamical systems The fundamental theory of integration analytical vector geometry and two dimensional linear dynamical systems are elaborated as well This publication is intended for beginning college students

Discovering Calculus with Mathematica? Cecilia A. Knoll, Michael D. Shaw, Jerry Johnson, Benny Evans, 1995-07-06 An enrichment supplement to an otherwise traditional calculus course Uses the Mathematica program as a tool to explore calculus beyond the level of rote calculations and template problems through multi step structured laboratory assignments Problems presented as tear out laboratory exercises with space for students to show their work No prior knowledge of Mathematica is required

Calculus & Mathematica Donald P. Brown, Horacio Porta, J. Jerry Uhl, 1991 Continued The electronic component is supported with a manual that contains the Basic and Tutorial sections as well as Literacy Sheets that test the student's knowledge of the subject away from the computer An additional booklet includes printed Give it a Try sheets This combination of fully interactive electronic lessons and printed material that clarifies and enhances the on screen problems makes Calculus Mathematica a powerful presence in the mathematics classroom

Multivariable Calculus and Mathematica® Kevin R. Coombes, Ronald L. Lipsman, Jonathan M. Rosenberg, 2012-12-06 One of the authors stated goals for this publication is to modernize the course through the integration of Mathematica Besides introducing students to the multivariable uses of Mathematica and instructing them on how to use it as a tool in simplifying calculations they also present introductions to geometry mathematical physics and kinematics topics of particular interest to engineering and physical science students In using Mathematica as a tool the authors take pains not to use it simply to define things as a whole bunch of new gadgets streamlined to the taste of the authors but rather they exploit the tremendous resources built into the program They also make it clear that Mathematica is not algorithms At the same time they clearly see the ways in which Mathematica can make things cleaner clearer and simpler The problem sets give students an opportunity to practice their newly learned skills covering simple calculations with Mathematica simple plots a review of one variable calculus using Mathematica for symbolic differentiation integration and numerical integration They also cover the practice of incorporating text and headings into a Mathematica notebook A DOS formatted diskette accompanies the printed work containing both Mathematica 2.2 and 3.0 version notebooks as well as sample examination problems for students This

supplementary work can be used with any standard multivariable calculus textbook It is assumed that in most cases students will also have access to an introductory primer for Mathematica

Exploring Calculus Crista Arangala, 2016-08-19 This text is meant to be a hands on lab manual that can be used in class every day to guide the exploration of the theory and applications of differential and integral calculus For the most part labs can be used individually or in a sequence Each lab consists of an explanation of material with integrated exercises Some labs are split into multiple subsections and thus exercises are separated by those subsections The exercise sections integrate problems technology Mathematica R visualization and Mathematica CDFs that allow students to discover the theory and applications of differential and integral calculus in a meaningful and memorable way Employs Mathematica to calculate and explore concepts and theories of calculus Uses engaging labs to inspire learning Includes many applications to a variety of fields that can promote research projects User friendly approach that can be used for classroom work or independent exploratory learning [Multivariable Calculus with Mathematica](#)

Robert P. Gilbert, Michael Shoushani, Yvonne Ou, 2020-11-24 Multivariable Calculus with Mathematica is a textbook addressing the calculus of several variables Instead of just using Mathematica to directly solve problems the students are encouraged to learn the syntax and to write their own code to solve problems This not only encourages scientific computing skills but at the same time stresses the complete understanding of the mathematics Questions are provided at the end of the chapters to test the student's theoretical understanding of the mathematics and there are also computer algebra questions which test the student's ability to apply their knowledge in non trivial ways Features Ensures that students are not just using the package to directly solve problems but learning the syntax to write their own code to solve problems Suitable as a main textbook for a Calculus III course and as a supplementary text for topics scientific computing engineering and mathematical physics Written in a style that engages the student's interest and encourages the understanding of the mathematical ideas *Calculus, Mathematica Supp.* Deborah Hughes-Hallett, Andrew M. Tucker, 1994-11-24 An innovative text that emphasizes the graphical numerical and analytical aspects of calculus throughout and often asks students to explain ideas using words This problem driven text introduces topics with a real world problem and derives the general results from it It can be used with any technology that can graph and find definite integrals numerically The derivative the integral differentiation and differential equations are among the topics covered [Calculus: Labs for Mathematica](#)

Selwyn L. Hollis, 1998 A direct continuation to CalcLabs for Mathematica Single Variable Contains chapters 8 13 and is for Version 3 0 *Undergraduate Mathematics for the Life Sciences* Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Animating Calculus Ed Packel, Stan Wagon, 1996-11-08 Calculus and change The two words go together Calculus is about change and approaches to teaching calculus are changing dramatically Thus it is both timely and appropriate to apply techniques of animation to the varied and important graphical aspects of calculus AB a computer algebra system Mathematica is an excellent tool for numerical and symbolic computation It also has the power to generate striking and colorful graphical images and to animate them dynamically The combination of these capabilities makes

Mathematica a natural resource for exploring the changing world of calculus and approaches to mastering it In addition Mathematica notebooks are easy to edit allowing flexible input for commands to Mathematica and stylish text for explanation to the reader Much has been written about the use and importance of technology in the teaching and learning of calculus We will not repeat the arguments or feign objectivity We are enthusiastic believers in the value of a significant laboratory experience as part of learning calculus and we think Mathematica notebooks are a most appropriate and exciting way to provide that experience The notebooks that follow represent our choice of laboratory topics for a course in one variable calculus They offer a balance between what we think belongs in a first year calculus course and what lends itself well to exploration in a Mathematica laboratory setting
