European Conference on Object-Oriented Programming](#) Jean Bezivin, Jean-Marie Hullot, Pierre Cointe, Henry Lieberman, 2007-03-06 In October 1983 an

informal meeting was organized in Le Cap d'Agde with the help of the BIGRE bulletin. Sixty people turned out to hear more than ten presentations on object oriented programming. More important was their unanimous demand for other more structured encounters. So about one year later the Object group was created by AFCET. A second workshop was organized in Brest and again one year later in Paris each time showing increased attendance and interest. The success of these meetings and the fact that similar activities were taking place in other European countries especially Great Britain and Germany led to the idea of an annual European Conference providing a forum for theorists and practitioners interested in the object oriented programming paradigm. It is impossible to acknowledge here all the people and organizations that welcomed with great enthusiasm the birth of the ECOOP conference and contributed to its organization. More than a hundred submissions were received and the program committee had the unpleasant task of turning down many valuable contributions. We hope however that the selection of papers for ECOOP 87 emphasizes the fundamental issues and problems of object oriented programming and will point toward interesting future research directions.

A Narrative History of Artificial Intelligence Masayuki Ida, 2024-05-02 This book addresses the history of artificial intelligence through the author's experiences from the 1960s when AI was a dream to give computers far more power than the progress for industrial technological advancement. The book starts from the AI pioneering days including what the author witnessed and impressed then the episodes during AI boom of the 80s and 90s when the author was involved in ANSI X3J13 committee work as a principal member translating Common Lisp books into Japanese leading committee works in Japan for global standardization and visiting MIT AI Lab for totally three years. The book points out that neural network research started in the 1980s highlighting the DARPA report dated in 1988. The last episodes and thoughts include the experiences with business school students after the author moved from engineering school. The former half is from a view of an engineering mind and then the latter is based on how the author struggled with business minded people to explain the core of AI. This book is suitable for anyone interested in the history of Artificial Intelligence. The content is easy to follow even for readers without prior knowledge of AI. Experts will also find something new and thought provoking.

In this greatly expanded edition of the defacto standard you'll learn about the nearly 200 changes already made since original publication and find out about gray areas likely to be revised later. Written by the Vice Chairman of X3J13 the ANSI committee responsible for the standardization of Common Lisp and co-developer of the language itself the new edition contains the entire text of the first edition plus six completely new chapters. They cover CLOS the Common Lisp Object System with new features to support function overloading and object oriented programming plus complete technical specifications. Loops a powerful control structure for multiple variables. Conditions a generalization of the error signaling mechanism. Series and generators. Plus other subjects not part of the ANSI standards but of interest to professional programmers. Throughout you'll find fresh examples additional clarifications warnings and tips all presented with the author.
