

How much a surface being illuminated by the incident light is measured by illuminance [lux].

Daylight factor (DF) characterises the amount of daylight a space might receive compared to what available from the sky. DF is most commonly estimated over a working plane (e.g. desk surface), and defined as follows:

$$DF [\%] = \frac{\text{Illuminance on Working plane}}{\text{Illuminance on Horizontal plane (Unobstructed sky)}}$$

Usually 0.8m above the floor
