**Volcanism in Antarctica: 200 Million Years of Subduction, Rifting and Continental Break-up** J.L. Smellie, K.S. Panter, A. Geyer, 2021-06-09 This memoir is the first to review all of Antarctica's volcanism between 200 million years ago and the Present. The region is still volcanically active. The volume is an amalgamation of in-depth syntheses which are presented within distinctly different tectonic settings. Each is described in terms of 1) the volcanology and eruptive palaeoenvironments, 2) petrology and origin of magma, and 3) active volcanism including tephrochronology. Important volcanic episodes include astonishingly voluminous mafic and felsic volcanic deposits associated with the Jurassic break-up of Gondwana, the construction and progressive demise of a major Jurassic to Present continental arc including back-arc alkaline basalts and volcanism in a young ensialic marginal basin, Miocene to Pleistocene mafic volcanism associated with post-subduction slab window formation, numerous Neogene alkaline volcanoes including the massive Erebus volcano and its persistent phonolitic lava lake that are widely distributed within and adjacent to one of the world's major zones of lithospheric extension, the West Antarctic Rift System, and very young ultrapotassic volcanism erupted subglacially and forming a world-wide type example, Gausberg.

*Natural Hazards* Edward A. Keller, Duane E. DeVecchio, 2019-03-29 The new revised fifth edition of *Natural Hazards* remains the go-to introductory level survey intended for university and college courses that are concerned with earth processes that have direct and often sudden and violent impacts on human society. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology, and solar system astronomy. The textbook explains the earth processes that drive hazardous events in an understandable way, illustrates how these processes interact with our civilization, and describes how we can better adjust to their effects. Written by leading scholars in the area, the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards, disasters, and catastrophes. The text is designed for learning, with chapters broken into small, consumable chunks of content for students. Each chapter opens with a list of learning objectives and ends with revision, as well as high-level critical thinking questions. A Concepts in Review feature provides an innovative end-of-chapter section that breaks down the chapter content by parts, reviewing the learning objectives, summary points, important visuals, and key terms. New case studies of hazardous events have been integrated into the text, and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text. Figures, illustrations, and photos have been updated throughout. The book is designed for a course in natural hazards for non-science majors, and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society.
