We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome an expanded discussion of the physiology and operation of mechanical ventilation obstetrical care in the ICU neurosurgical emergencies acute coronary syndromes cardiac arrhythmias role of whole body rehabilitation in the ICU ethical conduct of human research in the ICU and nursing care of the ICU patient

Haverkamp, Günter Breithardt, G. Hindricks, Martin Borggrefe, John A. Camm, Mohammad Shenasa, 2012-12-06 The past 10 years have seen a remarkable change in the approach to cardiac arrhythmias from a position of confidence and a feeling of well being about pharmacological treatment to a situation in which there is now marked uncertainty and general apprehension about the role of antiarrhythmic drugs Until relatively recently the prevailing concept in antiarrhythmic therapy was that arrhythmias could be controlled by drugs which slowed conduction or suppressed automaticity goals well served by the sodium channel blocking drugs and glycosides Drug re search was based largely on the development of agents mimicking those already available but with greater efficacy fewer side effects or a more favourable pharmacokinetic profile The CAST trial stands out as a landmark in the evolution of arrhythmia management rarely has a single trial had such a profound impact not only on clinical practice but also on the whole approach of those involved in the research development and regulation of antiarrhythmic drugs The results of the CAST trial designed to redress the shortcomings of earlier trials which had failed to demonstrate the anticipated improvement in mortality post myocardial infarction with the use of class I agents are well known The CAST and CAST II showed an increase in mortality associated with the active agent encainide flecainide or morizicine compared to placebo treatment They firmly established the potential danger in the use of class I drugs **Drug Therapy for the Elderly** Kenneth A.
