Basis Of Human Evolution:

Music, Language, and Human Evolution Nicholas Bannan,2012-07-19 The accompanying DVD provides some glimpses of the practice of music in a variety of cultures and illustrates ways of listening to the human voice that reveal its intrinsic musicality The DVD was edited by Pedro Espi Sanchis who recorded further material in South Africa

Kinship and Human Evolution Steen Bergendorff,2016-03-07 Kinship and Human Evolution Making Culture Becoming Human offers an exciting new explanation of human evolution Based on insights from anthropology it shows how humans became cultured beings capable of symbolic thought by developing kinship based exchange relationships Kinship was as an adaptive response to the harsh environment caused by the last major ice age In the extreme ice age conditions natural selection favored those groups that could forge and sustain such alliances and the resulting relationships enabled them to share different food resources between groups Kinship was a means of symbolically linking two or more groups to the mutual reproductive advantage of both From an evolutionary point of view kinship freed humans from their dependence on their immediate environment vastly expanding the niches they could occupy If we take kinship to be the major factor in human evolution networks and alliances must precede cultural units becoming the defining element of localized cultures Kinship and Human Evolution argues that it is living in networks that produces cultural differences and not culturally different groups that encounter one another it shows that kinship both saved and created humanity as we know it in all its cultural diversity

THE BASIS OF HUMAN EVOLUTION BERTRAM S. KRAUS, PH.D,1964 The Scientific Basis of Morality George Gore,1899

Human Evolution, Reproduction, and Morality Lewis Petrinovich,2013-11-11 An extremely well organized conceptually clear empirically informed and carefully argued volume What makes this contribution special is the invigorating infusion of a wealth of principles and knowledge derived from evolutionary biology neurophysiology and cognitive science The chapters provide abundant material for animated discussion Evolution and Human Behavior September 1997 When engaging in laboratory and field studies researchers have an extensive set of implicit assumptions that justifies their research However these assumptions are rarely made explicit either to the researchers themselves to their colleagues or to the public In this fascinating volume the author gives insight into these underlying beliefs that scientists have regarding moral and biological issues involved in human life such as decisions that influence reproductive practices the termination of life and the pursuit of biomedical research He then uses this descriptive base to develop an ethic based on rational liberalism His arguments stem from the thinking of biologists moral philosophers cognitive scientists and social and developmental psychologists

Human Physiology, Biochemistry and Basic Medicine Laurence A. Cole,Peter R. Kramer,2015-10-13 Human Physiology Biochemistry and Basic Medicine is a unique perspective that draws together human biology physiology biochemistry nutrition and cell biology in one comprehensive volume In this way it is uniquely qualified to address the needs of the emerging field of humanology a holistic approach to understanding the biology of humans and how they are

distinguished from other animals Coverage starts with human anatomy and physiology and the details of the workings of all parts of the male and female body Next coverage of human biochemistry and how sugars fats and amino acids are made and digested is discussed as is human basic medicine covering the science of diseases and human evolution and pseudo evolution The book concludes with coverage of basic human nutrition diseases and treatments and contains broad coverage that will give the reader an understanding of the entire human picture Covers the physiology anatomy nutrition biochemistry and cell biology of humans showing how they are distinguished from other animals Includes medical literature and internet

references example test questions and a list of pertinent words at the end of each chapter Provides unique perspective into all aspects of what makes up and controls humans **Basics in Human Evolution** Michael P Muehlenbein,2015-07-24

Song,2020 The basis of the morphological and behavioral differences between humans and other animals have been studied since antiquity However the genetic basis for these human specific traits remains poorly understood Recent computational screens to identify different classes of promising genomic regions have highlighted regions that are selectively deleted in

humans regions that experience accelerated substitution rates in humans and regions that are unique to humans Although reporter assays suggest that some of these genomic regions may act as enhancers little is known about how specific genomic changes affect cellular or organismal phenotypes In my dissertation research I have attempted to identify and understand genomic regions that underlie human evolution using two different approaches 1 interrogating the function of specific genomic regions that were identified in prior computational screens and 2 developing an experimental model system that would allow for the genetic dissection of human and chimpanzee differences within the same cell I have focused much of my doctoral research on one particular human specific insertion a tandem repeat located intronic to CACNA1C which encodes the pore forming alpha subunit of the L type voltage gated calcium channel CaV1 2 We find that this human specific tandem repeat is much larger than the size annotated in the human reference genome is closely linked to SNPs associated with bipolar disorder and schizophrenia and acts as an enhancer in vitro Strikingly different human alleles linked to either the protective associated or risk associated psychiatric disease SNPs display differential enhancer activity We observe that this mirrors differences seen in CACNA1C expression in previous studies suggesting that this human specific insertion may play a critical role in both human evolution and human disease To further investigate its function we are now modeling this human specific tandem repeat in mice and in brain organoids In ongoing work we have identified striking transcriptomic and calcium signaling changes in these models I have also investigated a human specific deletion that is located in the intergenic region between MET and CAV1 In initial experiments we have examined lacZ reporter expression at E18.5 in the mouse and performed RNA sequencing at E14.5 and P28 in different brain regions in mice where this human specific deletion has been recapitulated Additional work is needed to follow up on these preliminary results Lastly I have worked to develop a model system that would allow for unbiased experimental screens for genomic regions that underlie human evolution We have fused human and chimpanzee iPSC lines to generate tetraploid lines that contain both the human and the chimpanzee diploid genomes allo tetraploids We have also generated auto tetraploids same species and shown that these auto tetraploid iPSC lines are very similar to diploid iPSC lines at the transcriptional level suggesting that the tetraploid iPSC system may be suitable to uncover genetic differences between humans and chimpanzees Using RNA sequencing we have identified genes whose expression is controlled in cis or trans between humans and chimpanzees in iPSCs We have also explored methods to induce mitotic recombination between human and chimpanzee chromosomes within tetraploid iPSC lines using small molecules and CRISPR respectively Future work to fully establish mitotic recombination workflows will allow us to map traits that differ between human and chimp cell lines to specific genomic regions

Foundations of Biology Lorande Loss Woodruff,1927 **The Academy**,1910 Moral Partiality Yong Li,2022-07-29 Situated within the framework of Confucian family oriented ethics this book explores the issue of familial partiality and specifically discusses whether it is morally praiseworthy to love one's family partially In reviewing the tension between familial partiality and egalitarian impartiality

from different perspectives while also drawing on binary metrics to understand the issue that is the weak and strong sense of familial partiality in Confucian moral theory the author carefully discusses the efficacy of three major arguments to justify moral partiality It is concluded that the tree argument fails to justify moral partiality in Confucianism the evolutionary argument only justifies moral partiality in the weak sense that we should devote more resources to our family and the care argument fails to justify moral partiality in the strong sense that family takes priority in any case even at the expense of the principle of justice Seeking to address the quandary the author advances an alternative argument based on Thomas Aquinas theory of love to interpret Confucian view of partial relationships holding that partial treatment is assumed in partial relationships The title will appeal to scholars and students interested in Confucianism Chinese philosophy moral philosophy and comparative philosophy
