Shmaefsky, 2006-10-30 What should the average person know about science Because science is so central to life in the 21st century science educators and other leaders of the scientific community believe that it is essential that everyone understand the basic concepts of the most vital and far reaching disciplines Biotechnology 101 does exactly that This accessible volume provides readers whether students new to the field or just interested members of the lay public with the essential ideas of biotechnology using a minimum of jargon and mathematics Concepts are introduced in a progressive order so that more complicated ideas build on simpler ones and each is discussed in small bite sized segments so that they can be more easily understood This short volume will enable students and lay people to understand the basics of one of the most important scientific fields of endeavor for the future *Basic Biology of New Developments in Biotechnology* Alexander Hollaender, 2012-12-06 Allen I Laskin Biosciences Research Exxon Research and Engineering Company Linden New Jersey I was contacted in the Fall of 1981 by Professors Martin Dworkin

and Palmer Rogers of the University of Minnesota and asked to participate in the organization of the 1983 conference in the series Interface Between Biology and Medicine They and the other members of the advisory committee had the vision to realize that this was a time to depart somewhat from the traditional theme since one of the major areas of interest in the biological and related sciences these days is that of biotechnology in a broader sense than its impact on medicine alone In designing the format of the Conference we considered another factor There has been a plethora of conferences symposia and meetings on biotechnology over the past few years and the faces and topics have become rather familiar There has been a strong emphasis on the development of the technology and the biotechnology industry less attention has been paid to the science behind it One might get the impression from some of these meetings and from the popular press that biotechnology has just recently sprung up apparently full blown the very fundamental scientific discoveries and the great body of 1 ALLEN I LASKIN 2 continuing research that forms that basis for the technology is often obscured
