Knowledge-based Programming for Music Research John W. Schaffer, Deron McGee, 1997-01-01 In Knowledge Based Programming for Music Research Schaffer and McGee explore expert systems for applications in artificial intelligence AI The text concerns 1 basic principles for knowledge based programming 2 concepts and strategies for programming these systems 3 a universal data model for music analysis and 4 examples that concern specific aspects of design and application The authors also investigate Prolog programming in logic one of the most widely used computer languages for AI and base some of their applications on the recent implication based theories of Eugene Narmour Of the applications for programming a knowledge based system music analysis has the most potential Beyond identifying isolated elements it is possible to create programs that extend to chord structures and other more complex structures This kind of programming allows the authors to embed the rules of composition in the application and then extend the analysis throughout the musical work It also allows them to arrive at the underlying principles for a given composition As a tool for music analysis such programming has profound implications for further growth The text is designed for musicians at various levels and could also be used in courses on computer music programming Parts of the book have been successfully used in courses on computer

programming for music research with which the authors have direct experience The text includes extensive examples of code for use in individual Prolog applications and a comprehensive bibliography

Advances in the Design of Symbolic Computation Systems Alfonso Miola, Marco Temperini, 2012-12-06 New methodological aspects related to design and implementation of symbolic computation systems are considered in this volume aiming at integrating such aspects into a homogeneous software environment for scientific computation The proposed methodology is based on a combination of different techniques algebraic specification through modular approach and completion algorithms approximated and exact algebraic computing methods object oriented programming paradigm automated theorem proving through methods la Hilbert and methods of natural deduction In particular the proposed treatment of mathematical objects via techniques for method abstraction structures classification and exact representation the programming methodology which supports the design and implementation issues and reasoning capabilities supported by the whole framework are described

A Primer on Structured Program Design Gary L. Richardson, Charles William Butler, John D. Tomlinson, 1980 This book is written as an introductory primer on the subject of structured programming design The reader is anticipated to be either a student learning about programming and using this material as a companion or one who already knows the mechanics of a computer language and is now concerned about the design process In either situation some background is assumed previously or

concurrently Every effort has been made to present the material in a simple fashion without exotic notation or complex examples Administrative and data processing oriented individuals should profit from the material discussed which covers the spectrum from design theory through management process

Readings in Artificial Intelligence and Software Engineering Charles Rich, Richard C. Waters, 2014-06-28 Readings in Artificial Intelligence and Software Engineering covers the main techniques and application of artificial intelligence and software engineering The ultimate goal of artificial intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically This book is organized into 11 parts encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has been designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable
