part of microbiology or of pathology In general viruses contain only one type of nucleic acid either DNA or RNA that carries the information necessary for viral replication Nevertheless it is clear now that some viruses contain other nucleic acid molecules for example in retroviruses cellular transfer RNAs are essential for the action of the enzyme reverse transcriptase The chemical composition of viruses varies between different virus families For the simplest of viruses the virion is composed of viral structural proteins and nucleic acid but the situation becomes more complex with the enveloped viruses Virology is the study of viruses and their role in disease The science includes human animal insect plant fungal and bacterial virology Researchers may work in clinical ecological biological or biochemical fields This book provides the entire basic information required for the beginner of virology
