Approximation and Computation: A Festschrift in Honor of Walter Gautschi R.V.M. Zahar, 2012-12-06 R V M Zahar The sixty fifth birthday of Walter Gautschi provided an opportune moment for an international symposium in his honor to recognize his many contributions to mathematics and computer sciences Conceived by John Rice and sponsored by Purdue University the conference took place in West Lafayette from December 2 to 5 1993 and was organized around the four main themes representing Professor Gautschi s principal research interests Approximation Orthogonal Polynomials Quadrature and Special Functions Thirty eight speakers colleagues co authors research collaborators or doctoral students of Professor Gautschi were invited to present articles at the conference their lectures providing an approximately equal representation of the four disciplines Five invited speakers Germund Dahlquist Philip Davis Luigi Gatteschi Werner Rheinboldt and Stephan Ruscheweyh were unable to present their talks because of illness or other commitments although Professors Dahlquist Gatteschi and Ruscheweyh subsequently contributed articles to these proceedings Thus the final program contained thirty three technical lectures ten of which were plenary sessions Approximately eighty scientists attended the conference and for some sessions in particular Walter s presentation of his entertaining and informative Reflections and Recollections that number was complemented by

many visitors and friends as well as the family of the honoree A surprise visit by Paul Erdos provided one of the highlights of the conference week The ambiance at the symposium was extremely collegial due no doubt to the common academic interests and the personal friendships shared by the participants

Approximation and Computation Ramsay Vincent Michael Zahar, Walter Gautschi, 1994 **Scientific Computation on Mathematical Problems and Conjectures** Richard S. Varga, 1990-01-01 This book studies the use of scientific computation as a tool in attacking a number of mathematical problems and conjectures In this case scientific computation refers primarily to computations that are carried out with a large number of significant digits for calculations associated with a variety of numerical techniques such as the second Remez algorithm in polynomial and rational approximation theory Richardson extrapolation of sequences of numbers the accurate finding of zeros of polynomials of large degree and the numerical approximation of integrals by quadrature techniques The goal of this book is not to delve into the specialized field dealing with the creation of robust and reliable software needed to implement these high precision calculations but rather to emphasize the enormous power that existing software brings to the mathematician's arsenal of weapons for attacking mathematical problems and conjectures

The Best Approximation Method in Computational Mechanics Theodore V., II Hromadka, 2011-12-12 With the

overwhelming use of computers in engineering science and physics the approximate solution of complex mathematical systems of equations is almost commonplace The Best Approximation Method unifies many of the numerical methods used in computational mechanics Nevertheless despite the vast quantities of synthetic data there is still some doubt concerning the validity and accuracy of these approximations This publication assists the computer modeller in his search for the best approximation by presenting functional analysis concepts Computer programs are provided which can be used by readers with FORTRAN capability The classes of problems examined include engineering applications applied mathematics numerical analysis and computational mechanics The Best Approximation Method in Computational Mechanics serves as an introduction to functional analysis and mathematical analysis of computer modelling algorithms It makes computer modellers aware of already established principles and results assembled in functional analysis

Basic belief assignment approximations using 4 degree of non-redundancy for focal element
Yi YANG ,Deqiang HAN, Jean DEZERT, Dempster Shafer evidence theory also called the theory of belief function is widely used for uncertainty modeling and reasoning However when the size and number of focal elements are large the evidence combination will bring a high computational complexity To address this issue various methods have been proposed including the implementation of more efficient combination rules and the simplifications or approximations of Basic Belief Assignments BBAs In this paper a novel principle for approximating a BBA into a simpler one is proposed which is based on the degree of non redundancy for focal elements

Sparse Polynomial Approximation of High-Dimensional Functions Ben Adcock, Simone Brugiapaglia, Clayton G. Webster, 2022-02-16 Over seventy years ago Richard Bellman coined the term the curse of dimensionality to describe phenomena and computational challenges that arise in high dimensions These challenges in tandem with the ubiquity of high dimensional functions in real world applications have led to a lengthy focused research effort on high dimensional approximation that is the development of methods for approximating functions of many variables accurately and efficiently from data This book provides an in depth treatment of one of the latest installments in this long and ongoing story sparse polynomial approximation methods These methods have emerged as useful tools for various high dimensional approximation tasks arising in a range of applications in computational science and engineering It begins with a comprehensive overview of best s term polynomial approximation theory for holomorphic high dimensional functions as well as a detailed survey of applications to parametric differential equations It then describes methods for computing sparse polynomial approximations focusing on least squares and compressed sensing techniques Sparse Polynomial Approximation of High Dimensional Functions presents the first comprehensive and unified treatment of polynomial approximation techniques that can mitigate the curse of dimensionality in high dimensional approximation including least squares and compressed sensing It develops main concepts in a mathematically rigorous manner with full proofs given wherever possible and it contains many numerical examples each accompanied by downloadable code The authors provide an extensive bibliography of over 350 relevant references with an additional annotated bibliography available on the book s companion website www.sparse-hd-book.com This text is aimed at graduate students postdoctoral fellows and researchers in mathematics computer science and engineering who are interested in high dimensional polynomial approximation techniques
