BC, Before Computers Stephen Robertson, 2020-09-25 The idea that the digital age has revolutionized our day to day experience of the world is nothing new and has been amply recognized by cultural historians In contrast Stephen Robertson s BC Before Computers is a work which questions the idea that the mid twentieth century saw a single moment of rupture It is about all the things that we had to learn invent and understand all the ways we had to evolve our thinking before we could enter the information technology revolution of the second half of the twentieth century Its focus ranges from the beginnings of data processing right back to such originary forms of human technology as the development of writing systems gathering a whole history of revolutionary moments in the development of information technologies into a single although not linear narrative Treading the line between philosophy and technical history Robertson draws on his extensive technical knowledge to produce a text which is both thought provoking and accessible to a wide range of readers The book is wide in scope exploring the development of technologies in such diverse areas as cryptography visual art and music and the postal system Through all this it does not simply aim to tell the story of computer developments but to show that those developments rely on a long history of humans creating technologies for increasingly sophisticated methods of manipulating information Through a clear structure and engaging style it brings together a wealth of informative and conceptual explorations into the history of human technologies and avoids assumptions about any prior knowledge on the part of the reader As such it has the potential to be of interest to the expert and the general reader alike
