Mechanics: From Theory to Computation Journal of Nonlinear Science, 2012-12-06 Starting in 1996 a sequence of articles appeared in the Journal of Nonlinear Science dedicated to the memory of one of its original editors Juan Carlos Simo Applied Me chanics Stanford University Sadly Juan Carlos passed away at an early age in 1994 We lost a brilliant colleague and a wonderful person These articles are collected in the present volume Many of them are updated and corrected especially for this occasion These essays are in areas of scientific interest of Juan Carlos including mechanics particles rigid bodies fluids elasticity plastic ity etc geometry applied dynamics and of course computation His interests were extremely broad he did not see boundaries between computation mathematics me chanics and dynamics and in that sense he ideally reflected the spirit of the journal and many of the most exciting areas of current scientific interest Juan Carlos was one of

those select and gifted people who could cross interdisciplinary boundaries with extremely high quality and productive interactions of lasting value His contributions ranging from concrete engineering problems to fundamental mathematical theorems in geometric mechanics are remarkable In current conferences as well as in scientific books and articles and over a wide range of subjects one frequently hears how his ideas as well as specific results are often used and quoted this is one indication of just how profound and fundamental his work has impacted the community
