agents and contamination control goes back 50 years to my tour as a microbiologist in a field hospital in Europe during World
War II With no experience and relying solely on a military handbook I prepared thermometer trays with jars of blue
bichloride of mercury and pink isopropyl alcohol A preliminary typhoid diagnosis of one of our cooks resulted in the need for
lab testing His stool specimen and its subsequent disposal was my problem My handbook said bum it So burn it T did in a five
gallon can with gasoline Flames shot up almost six feet and my next mistake was to extinguish them with carbon
tetrachloride This resulted in the production of lethal phosgene gas The hospital had a near disaster I could say that at that
moment I vowed to write a how to book so that such stupidities could be avoided Nevertheless when I was offered the
opportunity to edit this book I thought back on the need for a real practical treatment of my subject This book then is a
practical handbook for technical service personnel and scientists who are not necessarily specialists in microbiology It
provides information on suitable antimicrobial agents appropriate to their particular problem solving needs and information
on the microbial groups contributing to the specific problem their ecologies and strategies for controlling their access to the
