Decision Analysis With Business Applications:

Decision Analysis with Business Applications V. M. Rao Tummala, 1973 *The Application of Decision Analysis to Multiattributed Business Decisions* James Everett Hatch, 1972

Making Great Decisions in Business and Life David R. Henderson, Charles L. Hooper, 2006 The phrase work smarter not harder has been repeatedly ridiculed in the Dilbert comic strip and elsewhere not because it is a bad idea but because it is thrown like a brick lifesaver to drowning employees To tell someone to work smarter is like telling someone to be happier healthier and richer It s not much help to merely repeat the objective what people need is a plan for achieving the objective In Making Great Decisions we show our readers how to achieve their objectives We write to help those in business and those in the business of life i e everyone to work smarter Our ideas are both simple and powerful We offer a better way to look at problems so that the solutions are easier to find We help supplement our readers clear thinking by summarizing some of the most powerful techniques we have discovered Have you ever driven through corn country From a distance all you see are corn stalks and more corn stalks in a jumbled mess Then suddenly when you get closer your perspective changes and you can see down the rows and realize that the corn was planted perfectly in straight lines Your perception of the crop changes from a messy jumble to a clear picture simply because you re in the right spot This book puts readers in that ideal spot So many problems seem like hopeless jumbles but then when you start using the techniques we discuss here they start to look as straightforward as the straightest line in an Iowa cornfield What motivated us to write this book is that over the years both of us have regularly come across people in organizations often bright people with MBAs or other graduate degrees who don t think they have the time energy or skills to make good decisions They have many clues but don t know how to put them together They regularly face situations that they could analyze with some of the tools they learned in their courses but they don t realize that We don t hold ourselves apart from this group and stories of our successes and failures are sprinkled throughout Making Great Decisions in Business and Life Publisher s Website

Decision Analysis for Managers David Charlesworth, 2013-03-13 Everybody has to make decisions they are unavoidable Yet we receive little or no education or training on how to make decisions Business decisions can be dif_ cult which people to hire which product lines or facilities to expand and which to sell or shut down which bid or proposal to accept which process to implement how much R D to invest in which environmental projects should receive the highest priority etc This book gives you all the tools you need to clarify and reach alignment on goals and objectives and understand trade offs in reaching those goals develop and examine alternatives systematically analyze the effects of risk and uncertainty and maximize the chances of achieving your goals and objectives Success getting what you want depends on luck and good decision making You can t control your luck but you can maximize your odds by making the best possible decisions and this book gets you there Broadly speaking this book organizes and presents otherwise formal decision making tools in an intuitively understandable fashion The presentation is informal but the concepts and tools are research based and formally accepted

Generalized Concavity in Fuzzy Optimization and Decision Analysis Jaroslav Ramík, Milan Vlach, 2012-12-06 Convexity of sets in linear spaces and concavity and convexity of functions lie at the root of beautiful theoretical results that are at the same time extremely useful in the analysis and solution of optimization problems including problems of either single objective or multiple objectives Not all of these results rely necessarily on convexity and concavity some of the results can guarantee that each local optimum is also a global optimum giving these methods broader application to a wider class of problems Hence the focus of the first part of the book is concerned with several types of generalized convex sets and generalized concave functions In addition to their applicability to nonconvex optimization these convex sets and generalized concave functions are used in the book s second part where decision making and optimization problems under uncertainty are investigated Uncertainty in the problem data often cannot be avoided when dealing with practical problems Errors occur in real world data for a host of reasons However over the last thirty years the fuzzy set approach has proved to be useful in these situations It is this approach to optimization under uncertainty that is extensively used and studied in the second part of this book Typically the membership functions of fuzzy sets involved in such problems are neither concave nor convex They are however often quasiconcave or concave in some generalized sense This opens possibilities for application of results on generalized concavity to fuzzy optimization Despite this obvious relation applying the interface of these two areas has been limited to date It is hoped that the combination of ideas and results from the field of generalized concavity on the one hand and fuzzy optimization on the other hand outlined and discussed in Generalized Concavity in Fuzzy Optimization and Decision Analysis will be of interest to both communities Our aim is to broaden the classes of problems that the combination of these two areas can satisfactorily address and solve
