**Deep Sky Objects** Jack Newton, Jonn Borden Newton, 1977      **The Observing Guide to the Messier Marathon** Don Machholz, 2002-10-10 The Messier Catalogue is a list of one hundred and ten galaxies star clusters and nebulae and includes many of the brightest and best known objects in the sky Amateur astronomers who find all the objects on the list in one night have successfully completed the Messier Marathon The Observing Guide to the Messier Marathon contains over 90 easy to use star maps to guide the observer from one object to the next and provides tips for a successful night of observing Don Machholz also tells the story of the eighteenth century astronomer Charles Messier and how he came to compile his extensive catalogue His complete guide to the Messier Marathon will help the amateur astronomer to observe the Messier Objects throughout the year using a small telescope or even a pair of binoculars Don Machholz is an engineer in Auburn California Interested in astronomy since childhood he is a renowned comet hunter having discovered nine comets that bear his name He writes articles for local California newspapers and radio stations for special astronomical events Between 1988 and 2000 Don Machholz was the Comets Recorder for the Association of Lunar and Planetary Recorders      **Spectroscopy:**

**The Key to the Stars** Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating      Webb Society Deep-sky Observer's Handbook: Clusters of galaxies Webb Society, 1979

Astronomical Sketching: A Step-by-Step Introduction Richard Handy, David B. Moody, Jeremy Perez, Erika Rix, Sol Robbins, 2007-06-12 This book presents the amateur with fine examples of astronomical sketches and step by step tutorials in each medium including pencil pen and ink chalks and pastels painting and computer graphics programs This unique book can teach almost anyone to create beautiful sketches of celestial objects by following simple illustrated step by step instructions Readers can select a chapter related to their preferred class of object and rapidly learn techniques in several media Each chapter contains useful information regarding equipment techniques for preserving and archiving sketches and suggestions for accurate record keeping      Telescopes and Techniques C. R. Kitchin, 2012-12-06 The modern aspiring

astronomer is faced with a bewildering choice of commercially produced telescopes including all the designs considered in the preceding chapter Yet only four decades ago the choice for a small telescope would have been between just a refractor and a Newtonian reflector That change has come about because of the enormous interest that has grown in astronomy since the start of the space age and with the mind boggling discoveries of the past 30 or 40 years Except for some of the very small instruments which are unfortunately often heavily promoted in general mail order catalogues camera shops and the like the optical quality of these commercially produced telescopes is almost uniformly excellent Although one product may be slightly better for some types of observation or more suited to the personal circumstances of the observer than another most of them will provide excellent observing opportunities The same general praise cannot be applied however to the mountings with which many of these telescopes are provided and those problems are covered in Chapter 6

**CCD Astrophotography: High-Quality Imaging from the Suburbs** Adam Stuart, 2006-09-10 This book details an approach to the problem of getting high quality astronomical images under light polluted conditions The book is for amateur astronomers interested in CCD imaging especially those who have to work under suburban conditions It outlines the materials and equipment used for high quality imaging The many wonderful images produced allow the reader to see the product of initially a fellow beginner's efforts Respectable images are attainable with modest equipment This book outlines a complete and thoroughly tested working program for every beginner to achieve high quality digital imaging

**Pattern Asterisms** John Chiravalle, 2007-04-22 Since the very beginning of astronomy people have looked up sky and constructed patterns the constellations out of the almost random scattering of stars in the night sky The fact that the constellations are still used to day reflects not their historical origins but their usefulness in identifying bright stars in the rotating dome of the sky Most people and all astronomers are familiar with for example the constellation of Orion and can thus easily point to Betelgeuse and Bellatrix as being Orion's shoulders It is the pattern made by the constellation that makes them easy to identify Suitable for observers using binoculars and medium size telescopes this catalog includes star pictures dot to dot outlines of the objects on a negative photograph for clarity and an artistic image next to the star patterns Size stellar magnitudes and coordinates are provided along with north direction star hopping instructions and Sky Atlas 2000 references The imaginative observer will surely begin to develop a new insight into star patterns and will start seeing patterns of his own under this catalog's influence

**How to Photograph the Moon and Planets with Your Digital Camera** Tony Buick, 2007-12-29 Since the advent of astronomical CCD imaging it has been possible for amateurs to produce images of a quality that was attainable only by universities and professional observatories just a decade ago However astronomical CCD cameras are still very expensive and technology has now progressed so that digital cameras the kind you use on holiday are more than capable of photographing the brighter astronomical objects notably the Moon and major planets Tony Buick has worked for two years on the techniques involved and has written this illustrated step by step manual for anyone who has a telescope of any size

and a digital camera The color images he has produced there are over 300 of them in the book are of breathtaking quality His book is more than a manual of techniques including details of how to make a low cost DIY camera mount and examples it also provides a concise photographic atlas of the whole of the nearside of the Moon with every image made using a standard digital camera and describes the various lunar features including the sites of manned and robotic landings *Starhopper's Guide to Messier Objects* Lenore Freeman,1983 Library of Congress Catalogs Library of Congress,1979 **Subject Catalog, 1978** Library of Congress,1978 Subject Catalog Library of Congress,1980-10 *Canadian Book Review Annual* ,1978 *Journal of the British Astronomical Association* ,1978 **A Visual Astronomer's Photographic Guide to the Deep Sky** Stefan Rumistrzewicz,2010-11-01 Over the last 15 years or so there has been a huge increase in the popularity of astrophotography with the advent of digital SLR cameras and CCD imagers These have enabled astronomers to take many images and indeed check images as they scan the skies Processing techniques using computer software have also made developing these images more accessible to those of us who are chemically challenged And let s face it some of the pictures you see these days in magazines books and on popular web forums are frankly amazing So why bother looking through the eyepiece you ask Well for one thing setting up the equipment is quicker You just take your scope out of the garage or if you re lucky enough to own one open the roof of your observatory align the scope and off you go If you have an equatorial mount you ll still need to roughly polar align but this really takes only a few moments The imager would most likely need to spend more time setting up This would include very accurate polar alignment for equatorial mounts then finding a guide star using his or her finder checking the software is functioning properly and c tinuous monitoring to make sure the alignment is absolutely precise throu out the imaging run That said an imager with a snug obsy at the end of the garden will have a quicker time setting up but then again so will the visual observer **Beginner's Guide to Amateur Astronomy** David J. Eicher,1993 Gets beginners off to a great start Introduces the hobby of astronomy with observation and photographic tips Identifies the best sky objects to observe using the naked eye binoculars and backyard telescopes By David J Eicher managing editor of Astronomy magazine 7 3 8 x 9 5 8 166 pgs 80 b softcover **Subject Guide to Books in Print** ,2001 The Deep-Sky Observer's Year Grant Privett,Paul Parsons,2001 Deep sky observing is easily the most popular field for amateur astronomers The big problem faced by non professional observers is what to look at what is visible at a particular time of year The Deep Sky Observers Year is a month by month guide to the best objects to view Objects are given a star rating according to how difficult they are to observe or image with a particular size of telescope The book includes many images produced by amateur astronomers as well as photographs from NASA ESA and ESO There is background information about the objects along with lots of useful tips hints and resources **National Union Catalog** ,1979 Includes entries for maps and atlases
