Characteristic Classes Of Foliations:

Characteristic Classes of Foliations H. V. Pittie, 1978 **Characteristic Classes of Foliations**, 1978 *Characteristic Classes and Foliations* Herbert Byron Shulman, 1972 Characteristic Classes and Foliations Herbert Byron Shulman, 1972
Geometry of Characteristic Classes Shigeyuki Morita, 2001 Characteristic classes are central to the modern study of the topology and geometry of manifolds They were first introduced in topology where for instance they could be used to define obstructions to the existence of certain fiber bundles Characteristic classes were later defined via the Chern Weil theory using connections on vector bundles thus revealing their geometric side In the late 1960s new theories arose that described still finer structures Examples of the so called secondary characteristic classes came from Chern Simons invariants Gelfand Fuks cohomology and the characteristic classes of flat bundles The new techniques are particularly useful for the study of fiber bundles whose structure groups are not finite dimensional The theory of characteristic classes of surface bundles is perhaps the most developed Here the special geometry of surfaces allows one to connect this theory to the theory of moduli space of Riemann surfaces i e Teichmuller theory In this book Morita presents an introduction to the modern theories of characteristic classes *On a Class of Foliations and the Evaluation of Their Characteristic Classes* Daniel R. Baker, 1976
Lectures on Characteristic Classes and Foliations Raoul Bott, Lawrence Conlon, 1971* **Foliated Bundles and Characteristic Classes** Franz W. Kamber, Philippe Tondeur, 2006-11-14 **Foliated Bundles and Characteristic Classes** Franz W. Kamber, Philippe Tondeur, 2014-01-15 **Characteristic Classes of Foliations** Harsh V. Pittie, 1975 **Cyclic Cohomology and Characteristic Classes for Foliations** Marius Crainic, 2000 **Non-vanishing and Continuous Variation of Exotic Characteristic Classes for Foliations** Ole Hjorth Rasmussen, 1976 Foliations on Riemannian Manifolds Philippe Tondeur, 2012-12-06 A first approximation to the idea of a foliation is a dynamical system and the resulting decomposition of a domain by its trajectories This is an idea that dates back to the beginning of the theory of differential equations i e the seventeenth century Towards the end of the nineteenth century Poincare developed methods for the study of global qualitative properties of solutions of dynamical systems in situations where explicit solution methods had failed He discovered that the study of the geometry of the space of trajectories of a dynamical system reveals complex phenomena He emphasized the qualitative nature of these phenomena thereby giving strong impetus to topological methods A second approximation is the idea of a foliation as a decomposition of a manifold into submanifolds all being of the same dimension Here the presence of singular submanifolds corresponding to the singularities in the case of a dynamical system is excluded This is the case we treat in this text but it is by no means a comprehensive analysis On the contrary many situations in mathematical physics most definitely require singular foliations for a proper modeling The global study of foliations in the spirit of Poincare was begun only in the 1940 s by Ehresmann and Reeb **Geometry of Foliations** Philippe Tondeur, 2012-12-06 The topics in this survey volume concern research done on the differential geometry of foliations over

the last few years After a discussion of the basic concepts in the theory of foliations in the first four chapters the subject is narrowed down to Riemannian foliations on closed manifolds beginning with Chapter 5 Following the discussion of the special case of flows in Chapter 6 Chapters 7 and 8 are devoted to Hodge theory for the transversal Laplacian and applications of the heat equation method to Riemannian foliations Chapter 9 on Lie foliations is a preparation for the statement of Molino's Structure Theorem for Riemannian foliations in Chapter 10 Some aspects of the spectral theory for Riemannian foliations are discussed in Chapter 11 Connes point of view of foliations as examples of non commutative spaces is briefly described in Chapter 12 Chapter 13 applies ideas of Riemannian foliation theory to an infinite dimensional context Aside from the list of references on Riemannian foliations items on this list are referred to in the text by we have included several appendices as follows Appendix A is a list of books and surveys on particular aspects of foliations Appendix B is a list of proceedings of conferences and symposia devoted partially or entirely to foliations Appendix C is a bibliography on foliations which attempts to be a reasonably complete list of papers and preprints on the subject of foliations up to 1995 and contains approximately 2500 titles
