Coloring Mixed Hypergraphs: Theory, Algorithms and Applications Vitaly Ivanovich Voloshin, 2002 The theory of graph coloring has existed for more than 150 years Historically graph coloring involved finding the minimum number of colors to be assigned to the vertices so that adjacent vertices would have different colors From this modest beginning the theory has become central in discrete mathematics with many contemporary generalizations and applications Generalization of graph coloring type problems to mixed hypergraphs brings many new dimensions to the theory of colorings A main feature of this book is that in the case of hypergraphs there exist problems on both the minimum and the maximum number of colors This feature pervades the theory methods algorithms and applications of mixed hypergraph coloring The book has broad appeal It will be of interest to both pure and applied mathematicians particularly those in the areas of discrete mathematics combinatorial optimization operations research computer science software engineering molecular biology and related businesses and industries It also makes a nice supplementary text for courses in graph theory and discrete mathematics This is especially useful for students in combinatorics and optimization Since the area is new students will have the chance at this stage to obtain results that may become classic in the future

Calude, 2001-06-22 This volume contains the papers presented at the Third Discrete Mathematics and Theoretical Computer Science Conference DMTCS1 which was held at Ovidius University Constantza Romania in July 2001 The conference was open to all areas of discrete mathematics and theoretical computer science and the papers contained within this volume cover topics such as abstract data types and specifications algorithms and data structures automata and formal languages computability complexity and constructive mathematics discrete mathematics combinatorial computing and category theory logic nonmonotonic logic and hybrid systems molecular computing **Forthcoming Books** Rose Arny, 2002 *Electrical & Electronics Abstracts*, 1997 **Maximum Gap of Mixed Hypergraph**, A mixed hypergraph is a triple $H = (X, C, D)$ where X is the vertex set and each of C, D is a list of subsets of X A strict t -coloring is a onto mapping from X to $\{1, 2, \dots, t\}$ such that each c belongs to C contains two vertices have a common value and each d belongs to D has two vertices have distinct values If H has a strict t -coloring then t belongs to $S(H)$ such $S(H)$ is called the feasible set of H and k is a gap if there are a value larger than k and a value less than k in the feasible set but k is not We find the minimum and maximum gap of a mixed hypergraph with more than 5 vertices Then we consider two special cases of the gap of mixed hypergraphs First if the mixed hypergraph is spanned by a complete bipartite graph then the gap is decided by the size of bipartition Second the (l, m) -uniform mixed hypergraph has gaps if $l \leq m - 2$ and we prove that the minimum number of vertices of a (l, m) -uniform mixed hypergraph which has gaps is $m - 2 + l - 1 = m - l - 1$ **Graph-theoretic**
