**Combinatorics '90** A. Barlotti, A. Bichara, P.V. Ceccherini, G. Tallini, 1992-08-17 This volume forms a valuable source of information on recent developments in research in combinatorics with special regard to the geometric point of view Topics covered include finite geometries arcs caps special varieties in a Galois space generalized quadrangles Benz planes foundation of geometry partial geometries Buekenhout geometries transitive permutation sets flat transitive geometries design theory finite groups near rings and semifields MV algebras coding theory cryptography and graph theory in its geometric and design aspects

**EUROCODE '90** Gerard Cohen, Pascale Charpin, 1991-07-24 This book presents a selection of the papers presented at EUROCODE 90 the symposium on coding theory held in Udine Italy November 1990 It gives the state of the art on coding in Europe and ranges from theoretical topics like algebraic geometry and combinatorial coding to applications like modulation real space decoding and VLSI implementation The book is divided into eight sections Algebraic codes Combinatorial codes Geometric codes Protection of information Convolutional codes Information theory Modulation Applications of coding Five of the sections are introduced by an invited contribution

**Configurations of Points and Lines** Branko Grünbaum, 2009 This is the only book on the topic of geometric configurations of points and lines It presents in detail the history of the topic with its surges and declines since its beginning in 1876 It covers all the advances in the field since the revival of interest in geometric configurations some 20 years ago The author's contributions are central to this revival In particular he initiated the study of 4 configurations that is those that contain four points on each line and four lines through each point the results are fully described in the text The main novelty in the approach to all geometric configurations is the concentration on their symmetries which make it possible to deal with configurations of rather large sizes The book brings the readers to the limits of present knowledge in a leisurely way enabling them to enjoy the material as well as entice them to try their hand at expanding it

**Surveys in Combinatorics, 1997** Rosemary Bailey, R. A. Bailey, 1997-07-31 This volume contains the invited lectures given at the Sixteenth British Combinatorial Conference held in July 1997 at Queen Mary and Westfield College University of London This biennial conference is a well established international event with speakers from all over the world Contained here is a survey of some of the most important work ever in graph theory with related papers that will be essential background reading to anyone doing research in this field Also included is an illustration of how recent developments in group theory lead to advances in graph theory and an exciting new construction of one of the Mathieu groups Other articles show how to construct a block design and how to use finite geometries An account is given of the computational complexity of counting The book provides a valuable survey of the present state of knowledge in combinatorics It will be useful to research workers and advanced graduate students primarily in mathematics but also in computer science statistics and engineering

Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling [Combinatorial Optimization Problems in Planning and Decision Making](#) Michael Z. Zgurovsky, Alexander A. Pavlov, 2018-09-24 The book focuses on the next fields of computer science combinatorial optimization scheduling theory decision theory and computer aided production management systems It also offers a quick introduction into the theory of PSC algorithms which are a new class of efficient methods for intractable problems of combinatorial optimization A PSC algorithm is an algorithm which includes sufficient conditions of a feasible solution optimality for which their checking can be implemented only at the stage of a feasible solution construction and this construction is carried out by a polynomial algorithm the first polynomial component of the PSC algorithm an approximation algorithm with polynomial complexity the second polynomial component of the PSC algorithm also for NP hard combinatorial optimization problems an exact subalgorithm if sufficient conditions were found fulfilment of which during the algorithm execution turns it into a polynomial complexity algorithm Practitioners and software developers will find the book useful for implementing advanced methods of production organization in the fields of planning including operative planning and decision making Scientists graduate and master students or system engineers who are interested in problems of combinatorial optimization decision making with poorly formalized overall goals or a multiple regression construction will benefit from this book **Geometry of Sporadic Groups: Volume 1, Petersen and Tilde Geometries** A.
