Complete Scattering Experiments:

Complete Scattering Experiments Uwe Becker, Albert Crowe, 2006-04-18 The Hans Kleinpoppen Symposium on Complete Scattering Experiments th was held in honor of Hans Kleinpoppen s 70 birthday It took place in Il Ciocco Italy The symposium had two purposes to present the work that Hans Kleinpoppen has done or initiated during his remarkable scientific career and to bring people from various fields together who perform complete scattering experiments Hans Kleinpoppen s work included electron and photon impact experiments which were accompanied by studies of entangled states a field of high current interest Representatives from each of these fields gave excellent lectures on their particular subjects and many discussions that started during the sessions were continued later in the relaxed atmosphere of the Il Ciocco resort The breathtaking view of the beautiful landscape will be an unforg table memory to all who participated in this extraordinary scientific event The coherent and ideal combination of subject people and location reflected the coherence of Hans Kleinpoppen s aims and activities in science and life We offer our grateful thanks to all contributors who made this volume such a worthy tribute to Hans Kleinpoppen We also like to thank Rainer Hentges for the painstaking work to prepare this volume in its complete ready to print version We are also grateful to the Royal Society of London and the Max Planck Gesellschaft who generous support of the Hans Kleinpoppen sym sium made this marvelous meeting and this proceedings possible

Perfect/Complete Scattering Experiments Hans Kleinpoppen, Bernd Lohmann, Alexei N. Grum-Grzhimailo, 2013-12-04 The main goal of this book is to elucidate what kind of experiment must be performed in order to determine the full set of independent parameters which can be extracted and calculated from theory where electrons photons atoms ions molecules or molecular ions may serve as the interacting constituents of matter The feasibility of such perfect and or complete experiments providing the complete quantum mechanical knowledge of the process is associated with the enormous potential of modern research techniques both in experiment and theory It is even difficult to overestimate the role of theory in setting of the complete experiment starting with the fact that an experiment can be complete only within a certain theoretical framework and ending with the direct prescription of what and in what conditions should be measured to make the experiment complete The language of the related theory is the language of quantum mechanical amplitudes and their relative phases This book captures the spirit of research in the direction of the complete experiment in atomic and molecular physics considering some of the basic quantum processes scattering Auger decay and photo ionization It includes a description of the experimental methods used to realize step by step the complete experiment up to the level of the amplitudes and phases The corresponding arsenal includes beyond determining the total cross section the observation of angle and spin resolved quantities photon polarization and correlation parameters measurements applying coincidence techniques preparing initially polarized targets and even more sophisticated methods The complete experiment is until today hardly to perform Therefore much attention is paid to the results of state of the art experiments providing detailed

information on the process and their comparison to the related theoretical approaches just to mention relativistic multi configurational Dirac Fock convergent close coupling Breit Pauli R matrix or relativistic distorted wave approaches as well as Green s operator methods This book has been written in honor of Herbert Walther and his major contribution to the field but even to stimulate advanced Bachelor and Master students by demonstrating that obviously nowadays atomic and molecular scattering physics yields and gives a much exciting appreciation for further advancing the field Advances in Atomic, Molecular, and Optical Physics, 2005-12-20 Benjamin Bederson contributed to the world of physics in many areas in atomic physics where he achieved renown by his scattering and polarizability experiments as the Editor in Chief for the American Physical Society where he saw the introduction of electronic publishing and a remarkable growth of the APS journals with ever increasing world wide contributions to these highly esteemed journals and as the originator of a number of international physics conferences in the fields of atomic and collision physics which are continuing to this day Bederson was also a great teacher and university administrator The first part of this volume of Advances in Atomic Molecular and Optical Physics AAMOP entitled Benjamin Bederson Works Comments and Legacies contains articles written from a personal perspective His days at Los Alamos during World War II working on the A bomb are recounted by V Fitch H Walther writes on the time when both were editors of AAMOP H Lustig E Merzbacher and B Crasemann with whom Bederson had a long term association at the American Physical Society contribute their experiences one of them in the style of a poem C D Rice recalls his days when he was Dean of the Faculty of Arts and Science at NYU and the education in physics that he received from Bederson then Dean of the Graduate School The contribution by R Stuewer is on Bederson as physicist historian his latest interest N Lane draws some parallels between two civic scientists Benjamin Bederson and the other Benjamin The papers are introduced by H H Stroke in an overview of Bederson s career A biography and bibliography are included The second part of the volume contains scientific articles on the Casimir effects L Spruch dipole polarizabilities X Chu A Dalgarno two electron molecular bonds revisited G Chen S A Chin Y Dou K T Kapale M Kim A A Svidzinsky K Uretkin H Xiong M O Scully and resonance fluorescence of two level atoms H Walther J Pinard and H H Stroke review spectroscopy with radioactive atoms T Miller writes on electron attachment and detachment in gases and with H Gould on recent developments in the measurement of static electric dipole polarizabilities R Celotta and J A Stroscio s most recent work on trapping and moving atoms on surfaces is contributed here C C Lin and J B Borrard s article is on electron impact excitation cross sections The late Edward Pollack wrote his last paper for this volume Atomic and Ionic Collisions L Vuskovic and S Popovi c write on atomic interactions in a weakly ionized gas and ionizing shock waves The last scientific article is by H Kleinpoppen B Lohmann A Grum Grzhimailo and U Becker on approaches to perfect complete scattering in atomic and molecular physics The book ends with an essay on teaching by R E Collins Benjamin Bederson Atomic Physicist Civil Scientist The Physical Review and Its Editor Los Alamos in World War II View from Below Physics in Poetry Casimir Effects Pedagogical Notes Atomic Physics in Collisions
