Computational Aspects Of Algebraic Curves Tanush Shaska, 2005-08-24 The development of new computational techniques and better computing power has made it possible to attack some classical problems of algebraic geometry The main goal of this book is to highlight such computational techniques related to algebraic curves The area of research in algebraic curves is receiving more interest not only from the mathematics community but also from engineers and computer scientists because of the importance of algebraic curves in applications including cryptography coding theory error correcting codes digital imaging computer vision and many more This book covers a wide variety of topics in the area including elliptic curve cryptography hyperelliptic curves representations on some Riemann-Roch spaces of modular curves computation of Hurwitz spectra generating systems of finite groups Galois groups of polynomials among other topics

The Arithmetic of Elliptic Curves Joseph H. Silverman, 2009-04-20 The theory of elliptic curves is distinguished by its long history and by the diversity of the methods that have been used in its study This book treats the arithmetic approach in its modern formulation through the use of basic algebraic number theory and algebraic geometry Following a brief discussion of the necessary algebraic-geometric results the book proceeds with an exposition of the geometry and the formal group of elliptic curves elliptic curves over finite fields the complex numbers local fields and global fields Final chapters deal with integral and rational points including Siegel's theorem and explicit computations for the curve $y^2 = x^3 + dx$ while three appendices conclude the whole Elliptic Curves in Characteristics 2 and 3 Group Cohomology and an overview of more advanced topics

Frontiers in General Relativity and Quantum Cosmology Research Victor H. Marselle,2007 Cosmology deals with the nature of the universe It can be broadly divided into three great ages The first began in the 6th century BC with the Pythagorean concept of a spherical Earth that is part of a universe in which the motions of the planets are governed by the harmonious relations of natural laws The second began in the 16th century with the Copernican revolution This in turn led into Newton s infinite universe The third began in the early 20th century with Albert Einstein s theory of general relativity and developed into the expanding universe we know today Einstein s general theory of relativity extended the new space and time concepts of the special theory of relativity from the domain of electric and magnetic phenomena to all of physics and particularly to the theory of gravitation By building on Einstein s previous work on special relativity general relativity sought to deal with accelerating frames of reference This in turn led to the principle of equivalence By dealing with accelerating frames of reference general relativity provides astronomers with the best theory to predict the effects of gravity The book examines in detail new and important work in this field

Complex Multiplication Reinhard Schertz,2010-04-29 This is a self contained 2010 account of the state of the art in classical complex multiplication that includes recent results on rings of integers and applications to cryptography using elliptic curves The author is exhaustive in his treatment giving a thorough development of the theory of elliptic functions modular functions and quadratic number fields and providing a concise summary of the results from class field theory The main results are accompanied by numerical examples equipping any reader with all the tools and formulas they need Topics covered include the construction of class fields over quadratic imaginary number fields by singular values of the modular invariant j and Weber s tau function explicit construction of rings of integers in ray class fields and Galois module structure the construction of cryptographically relevant elliptic curves over finite fields proof of Berwick s congruences using division values of the Weierstrass p function relations between elliptic units and class numbers
