*Entrepreneurial Communities and Ecosystems* Morgan R. Clevenger, Michael W-P Fortunato, 2022-06-24 Entrepreneurial Communities and Ecosystems Theories in Culture Empowerment and Leadership examines the deep sociocultural dynamics supporting effective and emergent entrepreneurial ecosystems and communities for a new generation of ecosystem builders and researchers The book provides current theories and discussion with relevant examples regarding culture empowerment and leadership in entrepreneurship to build more entrepreneurial communities anywhere beginning with any set of local advantages It clarifies the role of community in building an entrepreneurial ecosystem and expands the theory on how entrepreneurial communities and ecosystems differ and how they relate The book also illuminates the often avoided discussion about power with special attention to diversity with examples of Black women and LGBTQA entrepreneurship provides a deep dive into the range of formal and informal education framed as entrepreneurship ties the importance of entrepreneurship and entrepreneuring to resources available at the community state and national levels and introduces a new concept omnipreneurship which puts the skills of entrepreneurship in the service of global benefit and everyday action This research volume will be equally useful as an undergraduate or graduate text on the sociology of entrepreneurs and entrepreneurship as it is a field guide for ecosystem builders policy makers nonprofits and entrepreneurship and social researchers worldwide

*Communities and Ecosystems* Robert Harding Whittaker, 1970

*Communities and Ecosystems* David A. Wardle, 2013-02-15 Most of the earth's terrestrial species live in the soil These organisms which include many thousands of species of fungi and nematodes shape aboveground plant and animal life as well as our climate and atmosphere Indeed all terrestrial ecosystems consist of interdependent aboveground and belowground compartments Despite this aboveground and belowground ecology have been conducted largely in isolation This book represents the first major synthesis to focus explicitly on the connections between aboveground and belowground subsystems and their importance for community structure and ecosystem functioning David Wardle integrates a vast body of literature from numerous fields including population ecology ecosystem ecology ecophysiology ecological theory soil science and global change biology to explain the key conceptual issues relating to how aboveground and belowground communities affect one another and the processes that each component carries out He then applies these concepts to a host of critical questions including the regulation and function of biodiversity as well as the consequences of human induced global change in the form of biological invasions extinctions atmospheric carbon dioxide enrichment nitrogen deposition land use change and global warming Through ambitious theoretical synthesis and a tremendous range of examples Wardle shows that the key biotic drivers of community and ecosystem properties involve linkages between aboveground and belowground food webs biotic interaction the spatial and temporal dynamics of component organisms and ultimately the ecophysiological traits of those organisms that emerge as ecological drivers His conclusions will propel theoretical and empirical work throughout ecology

biological composition and diversity *Seeing Nature Through Gender* Virginia Scharff, 2003 Environmental history has traditionally told the story of Man and Nature. Scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender. *Seeing Nature through Gender* here reintroduces gender as a meaningful category of analysis for environmental history, showing how women's actions, desires, and choices have shaped the world and seeing men as gendered actors as well. In thirteen essays that show how gendered ideas have shaped the ways in which people have represented, experienced, and consumed their world, Virginia Scharff and her coauthors explore interactions between gender and environment in history. Ranging from colonial borderlands to transnational boundaries, from mountaintop to marketplace, they focus on historical representations of humans and nature, on questions about consumption, on environmental politics, and on the complex reciprocal relations among human bodies and changing landscapes. They also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies. Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly, often with dire consequences for other people and organisms. Here are considerations of the ways we study sexuality among birds, of William Byrd's masking sexual encounters in his account of an eighteenth-century expedition, of how the ecology of fire in a changing built environment has reshaped firefighters' own gendered identities. Some are playful, as in a piece on the evolution of snow bunnies to shred bunnies. Others are dead serious, as in a chilling portrait of how endocrine disruptors are reinventing humans, animals, and water systems from the cellular level out. Aiding and adding significantly to the enterprise of environmental history, *Seeing Nature through Gender* bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we've engraved on ourselves and on the planet.

**Community Ecology** Peter J. Morin, 2009-04-13 Community ecology, the study of the patterns and processes involving two or more species, has developed rapidly in the last two decades, driven by new and more sophisticated research techniques, advances in mathematical theory,

and modeling and the increasing pressure on the environment wrought by humans Once a purely descriptive science it is now one of the most forward looking areas of scientific inquiry Morin skillfully guides the reader through the main tenets and central concepts of community ecology competition predation food webs indirect effects habitat selection diversity and succession In an attempt to introduce the reader to the most balanced coverage possible Morin includes examples drawn from both the aquatic and terrestrial realm and from both plant and animal species Balancing theory with experimentation and drawing on exciting new studies to complement the historical foundations of the discipline he also stresses that both the empirical and theoretical approaches are necessary to drive ecology forward into the new millennium The final chapter on applied community ecology ably demonstrates how community ecological processes have a wide environmental relevance Although in its infancy the application of community ecology to emerging problems in human dominated ecosystems could mitigate problems as diverse as management strategies for important diseases transmitted by animals and the restoration and reconstruction of viable communities Required reading for all students and practitioners interested in community phenomena Community Ecology marks an important contribution to the development of this protean discipline The first serious textbook for a decade on one of the keystone subdisciplines of ecology Broad taxonomic and habitat coverage Section on implications of community ecology for environmental issues **McGraw-Hill Concise Encyclopedia of Science & Technology** ,2005 The most widely used science reference of its kind More than 7 000 concise articles covering more than 90 disciplines of science and technology all in one volume Drafting a Conservation Blueprint Craig Groves,2003-05-16 Drafting a Conservation Blueprint lays out for the first time in book form a step by step planning process for conserving the biological diversity of entire regions In an engaging and accessible style the author explains how to develop a regional conservation plan and offers experience based guidance that brings together relevant information from the fields of ecology conservation biology planning and policy Individual chapters outline and discuss the main steps of the planning process including an overview of the planning framework selecting conservation targets and setting goals assessing existing conservation areas and filling information gaps assessing population viability and ecological integrity selecting and designing a portfolio of conservation areas assessing threats and setting priorities A concluding section offers advice on turning conservation plans into action along with specific examples from around the world The book brings together a wide range of information about conservation planning that is grounded in both a strong scientific foundation and in the realities of implementation **Forest Resource Report** United States.
