**A First Course in Logic** Mark Verus Lawson, 2018-12-07 A First Course in Logic is an introduction to first order logic suitable for first and second year mathematicians and computer scientists There are three components to this course propositional logic Boolean algebras and predicate first order logic Logic is the basis of proofs in mathematics how do we know what we say is true and also of computer science how do I know this program will do what I think it will Surprisingly little mathematics is needed to learn and understand logic this course doesn't involve any calculus The real mathematical prerequisite is an ability to manipulate symbols in other words basic algebra Anyone who can write programs should have this ability

A First Course in Logic K. Codell Carter, 2003 Today's professionals need to construct good arguments and understand that using logic is important to their success With excellent examples from real life sources including film news media pop culture court cases letters to editors philosophical and scientific works A First Course in Logic helps readers see how logic relates to real life and makes the material more accessible and engaging Over 1 000 exercises are included and questions similar to those on the LSAT show readers how what they are learning is relevant to pre professional exams

*A First Course in Mathematical Logic and Set Theory* Michael L. O'Leary, 2015-09-14 A mathematical introduction to the theory and applications of logic and set theory with an emphasis on writing proofs Highlighting the applications and notations of basic mathematical concepts within the framework of logic and set theory A First Course in Mathematical Logic and Set Theory introduces how logic is used to prepare and structure proofs and solve more complex problems The book begins with propositional logic including two column proofs and truth table applications followed by first order logic which provides the structure for writing mathematical proofs Set theory is then introduced and serves as the basis for defining relations functions numbers mathematical induction ordinals and cardinals The book concludes with a primer on basic model theory with applications to abstract algebra A First Course in Mathematical Logic and Set Theory also includes Section exercises designed to show the interactions between topics and reinforce the presented ideas and concepts Numerous examples that illustrate theorems and employ basic concepts such as Euclid's lemma the Fibonacci sequence and unique factorization Coverage of important theorems including the well ordering theorem completeness theorem compactness theorem as well as the theorems of Löwenheim Skolem Burali Forti Hartogs Cantor Schröder Bernstein and König An excellent textbook for students studying the foundations of
