*A Catalog of Such Stuff as Dreams Are Made On* Kai-cheung Dung, 2022-06-21 *A Catalog of Such Stuff as Dreams Are Made On* is a playful and imaginative glimpse into the consumerist dreamscape of late nineties Hong Kong. First published in 1999, it comprises ninety-nine sketches of life just after the handover of the former British colony to China. Each of these stories in miniature begins from a piece of ephemera, usually consumer products or pop culture phenomena, and develops alternately comic and poignant snapshots of urban life. Dung's sketches center on once-trendy items that evoke the world at the turn of the millennium, such as Hello Kitty, Final Fantasy VIII, a Windows 98 disk, a clamshell mobile phone, Air Jordans, and cargo shorts. The protagonist of each piece, typically a young woman, is struck by an odd, even overriding, obsession with an object or fad. Characters embark on brief dalliances or relationships lasting no longer than the fashions that sparked them. Dung blends vivid everyday details: Portuguese egg tarts, Japanese TV shows, the Hong Kong subway, with situations that are often fantastical or preposterous. This catalog of vanished products illuminates how people use objects to define and even invent their own selves. A major work from one of Hong Kong's most gifted and original writers, Dung's archaeology of the end of the twentieth century speaks to perennial questions about consumerism, nostalgia, and identity.

**Color Image Processing** Rastislav Lukac, Konstantinos N. Plataniotis, 2018-10-03 *Color Image Processing Methods and Applications* embraces two decades of extraordinary growth in the technologies and applications for color image processing. The book offers comprehensive coverage of state-of-the-art systems, processing techniques, and emerging applications of digital color imaging. To elucidate the significant progress in specialized areas, the editors invited renowned authorities to address specific research challenges and recent trends in their area of expertise. The book begins by focusing on color fundamentals, including color management, gamut mapping, and color constancy. The remaining chapters detail the latest techniques and approaches to contemporary and traditional color image processing and analysis for a broad spectrum of sophisticated applications, including Vector and semantic processing, Secure imaging, Object recognition and feature detection, Facial and retinal image analysis, Digital camera image processing, Spectral and superresolution imaging, Image and video colorization, Virtual restoration of artwork, Video shot segmentation, and surveillance. *Color Image Processing Methods and Applications* is a versatile resource that can be used as a graduate textbook or as a stand-alone reference for the design and the implementation of various image and video processing tasks for cutting-edge applications. This book is part of the *Digital Imaging and Computer Vision* series. [Computational Color Science](#) Edoardo Provenzi, 2017-03-13 Color is a sensation generated both by the interaction of the visual sensors in the eyes with the natural environment and by the elaboration of visual information by higher brain functions. This book presents the mathematical framework needed to deal with several models of color processing of digital images. The book starts with a short yet exhaustive introduction to the basic phenomenological features of color vision, which are constantly used throughout the book. The discussion of computational

issues starts with color constancy which is dealt with in a rigorous and self contained mathematical setting Then the original Retinex model and its numerous variants are introduced and analyzed with direct discrete equations The remainder of the book is dedicated to the variational analysis of Retinex like models contextualizing their action with respect to contrast enhancement
