## **Difference Algebra:**

**Difference Algebra** Alexander Levin, 2008-04-19 Difference algebra grew out of the study of algebraic difference equations with coefficients from functional fields The first stage of this development of the theory is associated with its founder J F Ritt 1893 1951 and R Cohn whose book *Difference Algebra* 1965 remained the only fundamental monograph on the subject for many years Nowadays difference algebra has overgrown the frame of the theory of ordinary algebraic difference equations and appears as a rich theory with applications to the study of equations in finite differences functional equations differential equations with delay algebraic structures with operators group and semigroup rings The monograph is intended for graduate students and researchers in difference and differential algebra commutative algebra ring theory and algebraic geometry The book is self contained it requires no prerequisites other than the knowledge of basic algebraic concepts and a mathematical maturity of an advanced undergraduate *Difference Algebra* Richard M. *Differential and Difference Dimension Polynomials* Alexander V. Mikhalev, A.B. Levin, E.V. Pankratiev, M.V. Kondratieva, 2013-03-09 The role of Hilbert polynomials in commutative and homological algebra as well as in algebraic geometry and combinatorics is well known A similar role in differential algebra is played by the differential dimension polynomials The notion of differential dimension polynomial was introduced by E Kolchin in 1964 KoI64 but the problems and ideas that had led to this notion and that are reflected in this book have essentially more long history Actually one can say that the differential dimension polynomial describes in exact terms the freedom degree of a dynamic system as well as the number of arbitrary constants in the general solution of a system of algebraic differential equations The first attempts of such description were made at the end of 19th century by Jacobi Ja890 who estimated the number of algebraically independent constants in the general solution of a system of linear ordinary differential equations Later on Jacobi's results were extended to some cases of nonlinear systems but in general case the problem of such estimation that is known as the problem of Jacobi's bound remains open There are some generalization of the problem of Jacobi's bound to the partial differential equations but the results in this area are just appearing At the beginning of the 20th century algebraic methods in the theory of differential equations were actively developed by F Riquier Riquier and M **Academic Algebra, for the Use of Common and High Schools and Academies ...** Edward Albert Bowser, 1888 *The Forward examination algebra with answers, by G.W.*
