

THE CAMBRIDGE SERIES OF PHYSICAL CHEMISTRY

DIFFUSION in and through SOLIDS

By
RICHARD M. BARRER

A study of the permeability of materials to solids, and of the diffusion constants of solutes within them. The author's aims in this book are: to keep a balance between experimental methods and their mathematical and physical interpretations; to provide lists of permeability and diffusion constants for ready reference; and to outline current theories of processes of permeation, solution, and diffusion.

CHAPTER 1 gives a number of solutions of the diffusion equation suitable for treating the various problems that arise in the course of the study.

CHAPTER 2 surveys the different types of gas flow in capillary systems.

CHAPTER 3 deals with gas flow through glasses and crystals.

CHAPTERS 4 and 5 discuss the processes of diffusion of gases through and in metals—a subject of growing technical application.

CHAPTERS 6 and 7 describe the phenomena of conductivity and diffusion of ions and atoms in ionic lattices and metals.

CHAPTER 8 describes surface diffusion.

CHAPTERS 9 and 10 discuss the problems of gas and vapour flow through diffusion in organic polymers, carefully collecting together a large number of constants for systems of technical importance.
