Understanding Distributed Processor Systems for Controls Samuel M. Herb,2013-01-24 Understanding Distributed Processor Systems for Controls explains how modern control systems manage industrial processes It guides readers through the purpose of control systems the hardware and software components inside controllers and how operators interact with plants using video displays and human machine interfaces It balances explanations of older technologies still in use with the rapidly changing innovations shaping today s systems emphasizing that the true goal is improved plant productivity not just impressive features This book covers the process of planning specifying selecting and implementing a control system including vendor comparison testing and project management It also examines human factors such as how operators perceive information design principles for clear screens and alarms and methods to make interfaces intuitive and safe Technical ideas are presented clearly so that engineers managers technicians and newcomers including non engineers can ask the right questions and make better decisions about control systems *Technical Challenges in the Application and Licensing of Digital Instrumentation and Control Systems in Nuclear Power Plants* International Atomic Energy Agency,2015 With the modernization of existing analogue instrumentation and control I C systems in nuclear power plants through digital I C technology and the implementation of digital I C systems in new plants the industry is faced with significant challenges These challenges appear in the form of difficulties in managing the necessarily incremental transition highly integrated and interdependent architectures the flexible configurability enabled by digital technology and uncertainty and inconsistency in licensing digital I C systems and equipment in the different Member States This publication discusses 17 major issues that utilities developers suppliers and regulatory stakeholders need to consider so that the industry can capture and benefit from shared experience recent technological developments and emerging best practices *Technical Challenges in the Application and Licensing of Digital Instrumentation and Control Systems in Nuclear Power Plants* ,2015 With the modernization of existing analogue instrumentation and control I C systems in nuclear power plants through digital I C technology and the implementation of digital I C systems in new plants the industry is faced with significant challenges These challenges appear in the form of difficulties in managing the necessarily incremental transition highly integrated and interdependent architectures the flexible configurability enabled by digital technology and uncertainty and inconsistency in licensing digital I C systems and equipment in the different Member States This publication discusses 17 major issues that

Automatic Control Systems ,1970 **An Investigation of Digital Instrumentation and Control System Failure Modes** ,2010 A study sponsored by the Nuclear Regulatory Commission study was conducted to investigate digital instrumentation and control DI C systems and module level failure modes using a number of databases both in the nuclear and non nuclear industries The objectives of the study were to obtain relevant operational experience data to identify generic DI C system failure modes and failure mechanisms and to obtain generic insights with the intent of using results to establish a unified framework for categorizing failure modes and mechanisms Of the seven databases studied the Equipment Performance Information Exchange database was found to contain the most useful data relevant to the study Even so the general lack of quality relative to the objectives of the study did not allow the development of a unified framework for failure modes and mechanisms of nuclear I C systems However an attempt was made to characterize all the failure modes observed i e without regard to the type of I C equipment under consideration into common categories It was found that all the failure modes identified could be characterized as a detectable preventable before failures b age related failures c random failures d random sudden failures or e intermittent failures The percentage of failure modes characterized as a was significant implying that a significant reduction in system failures could be achieved through improved online monitoring exhaustive testing prior to installation adequate configuration control or verification and validation etc **Which University?** ,1970
