

How to hold a camera

It's worth taking a few minutes to practise holding your camera before you start shooting – you'll get sharper shots

FINGER

The camera body is designed to be gripped with your right hand and your index finger over the shutter release. You should be able to squeeze the shutter when it's time to take a picture.

HAND

Place your palm in your left hand. This should allow you to hold the front of the camera against your face with the hand holding your right hand against the camera.

ELBOWS

Turn your elbows into your body to brace your camera steady. The further out your elbows are, the more unstable you will be.

EYEBROW CONTACT

Let the camera rest on your eye and rest the viewfinder against your forehead. This helps another point of contact on the body for more stability.

PORTRAIT

If you're used to holding your camera in portrait orientation, then turn it over on the other side of the lens. It can be a little awkward, but you'll get better results.

LEGS

Place your feet with your feet shoulder-width apart. Keeping your feet shoulder-width apart will help you to maintain a steady body stance.

TAKE A MAT

When kneeling to take some pictures, you might get on a mat. Take a mat or a piece of fabric to kneel on for comfort while maintaining your stance.

BACK PANEL CONTROL

With your hands in the correct position, your thumb is well placed to access the controls on the back of the camera. Use the settings menu.

BRING ONE LEG UP

By sitting down with a kneeling position and bringing one leg up, you can rest your body into a more stable position. Place your elbow on your knee to connect your leg and arm together, creating a second point of contact with the ground.

BEST ELBOWS

If you have a camera around your neck, then your elbows will be a little further away. Look for a way to brace your elbows to make it work.

CONTROL YOUR BREATHING

Remember when you take a shot? If you hold your breath or breathe in, you'll find your most important shot. It's about the same as the difference between your breathing and not breathing.

LEAN IN

Leaning against a wall or other object is a good way to brace your camera. This can be useful when shooting in a tight space without a tripod.
