## **Commutant Lifting Approach To Interpolation Problems:**

**The Commutant Lifting Approach to Interpolation Problems** Foias, Frazho, 2013-11-11 Classical  $H$  interpolation theory was conceived at the beginning of the century by C Caratheodory L Fejer and I Schur The basic method due to Schur in solving these problems consists in applying the Mobius transform to peel off the data In 1967 D Sarason encompassed these classical interpolation problems in a representation theorem of operators commuting with special contractions Shortly after that in 1968 B Sz Nagy and C Foias obtained a purely geometrical extension of Sarason's results Actually their result states that operators intertwining restrictions of co isometries can be extended by preserving their norm to operators intertwining these co isometries starring with R G Douglas P S Muhly and C Pearcy this is referred to as the commutant lifting theorem In 1957 Z Nehari considered an  $L$  interpolation problem which in turn encompassed the same classical interpolation problems as well as the computation of the distance of a function  $f$  in  $L$  to  $H$  At about the same time as Sarason's work V M

**Metric Constrained Interpolation, Commutant Lifting and Systems** C. Foias, A.E. Frazho, I. Gohberg, M.A. Kaashoek, 2012-10-17 This book presents a unified approach for solving both stationary and nonstationary interpolation problems in finite or infinite dimensions based on the commutant lifting theorem from operator theory and the state space method from mathematical system theory Initially the authors planned a number of papers treating nonstationary interpolation problems of Nevanlinna Pick and Nehari type by reducing these nonstationary problems to stationary ones for operator valued functions with operator arguments and using classical commutant lifting techniques This reduction method required us to review and further develop the classical results for the stationary problems in this more general framework Here the system theory turned out to be very useful for setting up the problems and for providing natural state space formulas for describing the solutions In this way our work involved us in a much wider program than originally planned The final results of our efforts are presented here The financial support in 1994 from the NWO stimulanprogramma for the Thomas Stieltjes Institute for Mathematics in the Netherlands enabled us to start the research which led to the present book We also gratefully acknowledge the support from our home institutions Indiana University at Bloomington Purdue University at West Lafayette Tel Aviv University and the Vrije Universiteit at Amsterdam We warmly thank Dr A L Sakhnovich for his careful reading of a large part of the manuscript Finally Sharon Wise prepared very efficiently and with great care the troff file of this manuscript we are grateful for her excellent typing

Kister, 2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the

following Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild Faisceaux algebriques coherents by Jean Pierre Serre reviewed by C Chevalley and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR
