**Comparative Education** H. W. Foght, 1927      *Comparative Analysis of the Educational Systems of the United States of America and Finland* Caroline Mutuku, 2018-06-13 Essay from the year 2018 in the subject Didactics Common Didactics Educational Objectives Methods grade 1 6 language English abstract A comparison of the education disparity in the United States of America and the unified education system in Finland helps to underscore the differences in learning outcomes in various countries Although Finland is a smaller economy its education system consistently puts the learning outcomes higher

than the United States of America The overall availability of quality schools programs tend to be well established in wealthy industrialized nations than in the more poor developing ones However there are large differences that distinguish even countries that are geographically near each other and operating at similar economic development For instance all children aged three years are enrolled in an education program in Finland and France compared with twenty eight percent of Spanish and Portuguese preschool children Even within the same nation access to education is more prevalent in urban centres compared with the rural areas It is only in the last few decades that systematic research begun to look at the linkages that exist between national policy childhood education programs and the outcomes of the children There is widespread body of evidence that suggest that participation in a preschool program enhances cognitive development among children and prepares for success in their schooling

**How the World Learns: Comparative Educational Systems Series** , America s blueprint for mass education has been followed across the globe yet international student assessments show that achievement varies sharply with the U S and much of Europe typically scoring average at best Not surprisingly this state of affairs has sparked anxieties about an educational crisis Adding even more fuel to the fire many cite a growing disconnect between what schools teach and the needs of a rapidly changing market The problem if there is one is highly complex and in these 24 thought provoking lectures led by an Associate Professor of Comparative and International Education you ll take a meaningful look at education around the world to understand why You ll go beyond prescriptions for quick fixes to engage in a detailed comparison of teaching methods and student achievement from the focus on STEM instruction and the intent of morals education to the role of preschool and the importance of creativity You ll discover why Finland and South Korea rank as the two best educational systems despite having diametrically opposed approaches and consider the unique challenges facing schools from America to South Africa You ll use internationally comparative data to identify strengths and weaknesses and to see how this information is used and sometimes misused to enact policies The data and systems are not studied in a vacuum however Instead you ll explore how cultural religious socioeconomic and historical contexts may influence these methods and whether one nation s best practice could backfire in another Along the way you ll contemplate questions about the goals of education and the ways teachers may help students reach them from whether standardized testing is the best way to measure what a person is capable of to whether teachers should have a role beyond presenting academic content
