Communicative Behavior And Evolution:

Communicative Behavior and Evolution Martin E. Hahn, Edward C. Simmel, 2013-10-22 Communicative Behavior and Evolution presents the selected works of experts from different scientific disciplines that investigate the evolution of communicative behavior The book is composed of papers that study communicative behavior of humans and of different kinds of animals The text contains articles that discuss attempts in the study of behavioral evolution communication and human language the behavior genetic approach systems approach to genetic and selection mechanisms investigation of interspecific communication and learned language in chimpanzees Zoologists ethologists behavioral geneticists and psychologists will find this book highly interesting

The Evolution of Animal Communication William A. Searcy, Stephen Nowicki, 2005-09-04 Gull chicks beg for food from their parents Peacocks spread their tails to attract potential mates Meerkats alert family members of the approach of predators But are these and other animals sometimes dishonest That s what William Searcy and Stephen Nowicki ask in The Evolution of Animal Communication They take on the fascinating yet perplexing question of the dependability of animal signaling systems The book probes such phenomena as the begging of nesting birds alarm calls in squirrels and primates carotenoid coloration in fish and birds the calls of frogs and toads and weapon displays in crustaceans Do these signals convey accurate information about the signaler its future behavior or its environment Or do they mislead receivers in a way that benefits the signaler For example is the begging chick really hungry as its cries indicate or is it lobbying to get more food than its brothers and sisters Searcy and Nowicki take on these and other questions by developing clear definitions of key issues by reviewing the most relevant empirical data and game theory models available and by asking how well theory matches data They find that animal communication is largely reliable but that this basic reliability also allows the clever deceiver to flourish Well researched and clearly written their book provides new insight into animal communication behavior and evolution

The Evolution of Language Out of Pre-language Talmy Givón, Bertram F. Malle, 2002-01-01 The contributors to this volume are linguists psychologists neuroscientists primatologists and anthropologists who share the assumption that language just as mind and brain are products of biological evolution The rise of human language is not viewed as a serendipitous mutation that gave birth to a unique linguistic organ but as a gradual adaptive extension of pre existing mental capacities and brain structures The contributors carefully study brain mechanisms diachronic change language acquisition and the parallels between cognitive and linguistic structures to weave a web of hypotheses and suggestive empirical findings on the origins of language and the connections of language to other human capacities The chapters discuss brain pathways that support linguistic processing origins of specific linguistic features in temporal and hierarchical structures of the mind the possible co evolution of language and the reasoning about mental states and the aspects of language learning that may serve as models of evolutionary change

The Evolution of Social Communication in Primates Marco Pina, Nathalie Gontier, 2014-05-23 How did social communication evolve in primates In

this volume primatologists linguists anthropologists cognitive scientists and philosophers of science systematically analyze how their specific disciplines demarcate the research questions and methodologies involved in the study of the evolutionary origins of social communication in primates in general and in humans in particular In the first part of the book historians and philosophers of science address how the epistemological frameworks associated with primate communication and language evolution studies have changed over time and how these conceptual changes affect our current studies on the subject matter In the second part scholars provide cutting edge insights into the various means through which primates communicate socially in both natural and experimental settings They examine the behavioral building blocks by which primates communicate and they analyze what the cognitive requirements are for displaying communicative acts Chapters highlight cross fostering and language experiments with primates primate mother infant communication the display of emotions and expressions manual gestures and vocal signals joint attention intentionality and theory of mind The primary focus of the third part is on how these various types of communicative behavior possibly evolved and how they can be understood as evolutionary precursors to human language Leading scholars analyze how both manual and vocal gestures gave way to mimetic and imitational protolanguage and how the latter possibly transitioned into human language In the final part we turn to the hominin lineage and anthropologists archeologists and linguists investigate what the necessary neurocognitive anatomical and behavioral features are in order for human language to evolve and how language differs from other forms of primate communication

An Investigation Into the Evolution of Communicative Behaviors Ezequiel A. Di Paolo, 1996

Abstract Communication is a phenomenon with many different aspects and it has attracted the attention of a variety of scientific disciplines Biology being perhaps the one with the best chance of providing a good theoretical backbone by addressing the unifying theme that underlies the different views on the subject However recent work in the evolution of communication have tended to evade rather than embrace this task I provide a critical analysis of the reasons for this situation which are for the most part methodological and conceptual and manifest themselves in the way biologists characterize the phenomenon as well as in the tools they use to research it I present an alternative characterization in terms of autopoietic theory and show that not only is it possible to work with it but that it also addresses issues of interest to other disciplines By choosing as my object of study a game of interactions I intend to provide some continuity with traditional approaches and the view of communication presented here Traditional tools such as game theory are not blindly discarded but are extended in order to go beyond equilibrium studies into the nature of the evolutionary dynamics Further extension involves the use of a computational model so some of the methodological issues that arise by its use are discussed Within this model communication evolves in a society of artificial agents even in the presence of costs against it and this is explained in terms of selective mechanisms acting within the constraints provided by other factors such as spatial organization A complex network of mechanisms is explored by studying the phenomenology of emergent self regulating unities in the spatial

distribution of agents Dialogic communication also evolves non trivially in a similar game in which agents share all the relevant environmental information and by coordinating their actions they are able to perform tasks beyond their individual cognitive capabilities showing that the concept of information has to be used with care and providing a metaphor for the evolution of cognition as rooted in social activity Conclusions are drawn both on the general subject of explaining complex processes with many interacting causal factors and on the relation of these results to the evolution of natural communication

Mirror Neurons and the Evolution of Brain and Language Maksim Stamenov, Vittorio Gallese, 2002-01-01 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one s own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other s actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B *The Behavior of Communicating* W. John Smith, 1977 In this book W John Smith enlarges ethology s perspective on communication and takes it in new directions Smith s approach is deeply rooted in the ethological tradition of naturalistic observations Detailed analysis of observed displays and display repertoires illuminates the theoretical discussion that forms the core of the book

Communicative Behaviour and Evolution Martin E. Hahn, 1976 Current Perspectives in Primate Social Dynamics David Milton Taub, Frederick A. King, 1986 **Brain, Behavior and Evolution** ,1980 **Animal Behaviour Abstracts** ,1989 Behavioural Biology Abstracts ,1979 **Neurobiology of Social Communication In Primates** Horest Steklis, 2012-12-02 Neurobiology of Social Communication in Primates An Evolutionary Perspective presents evidence on the neural basis of communicative behavior in primates reevaluating the relationship between human language and animal communication in view of the linguistic abilities of chimpanzees This book consists of 10 chapters Chapter 1 discusses some

of the persistent problems in evolutionary neurobiology of primate communication The effects of brain lesions and stimulation on vocalization in New and Old World monkeys relation between species differences in peripheral vocal structures and species contrasts in vocal performance and anatomy and physiology of the nonhuman primate auditory system are reviewed in Chapters 2 to 4 Chapters 5 to 7 examine the effects of electrical brain stimulation on human verbal communication and facial expression clinical data pertaining to language pathologies and neural mechanisms of manual and oral control The last three chapters summarize the materials presented in earlier chapters This publication is recommended for neuroscientists behavioral biologists neurologists psychiatrists and students interested in the evolutionary heritage of human speech and language
