Arma Model Identification:

ARMA Model Identification ByoungSeon Choi,2012-12-06 During the last two decades considerable progress has been made in statistical time series analysis The aim of this book is to present a survey of one of the most active areas in this field the identification of autoregressive moving average models i e determining their orders Readers are assumed to have already taken one course on time series analysis as might be offered in a graduate course but otherwise this account is self contained The main topics covered include Box Jenkins method inverse autocorrelation functions penalty function identification such as AIC BIC techniques and Hannan and Quinn s method instrumental regression and a range of pattern identification methods Rather than cover all the methods in detail the emphasis is on exploring the fundamental ideas underlying them Extensive references are given to the research literature and as a result all those engaged in research in this subject will find this an invaluable aid to their work

Time Series ARMA Model Identification by Estimating Information Emanuel Parzen,TEXAS A AND M UNIV COLLEGE STATION INST OF STATISTICS.,1983 Statisticians economists and system engineers are becoming aware that to identify models for time series and dynamic systems information theoretic ideas can play a valuable and unifying role Models for time series Y_t can be formulated as hypotheses concerning the information about Y_t given various bases involving past current and future values of Y and related time series X To determine sets of variables that are sufficient to forecast Y_t and especially to determine an ARMA model for Y_t an approach is presented which estimates and compares various information increments The author discusses how to non parametrically estimate the MA infinity representation and use it to form estimators of the many information numbers that might compare to identify an ARMA model for a univariate time series Author Autoregressive Moving-average (ARMA) Model Identification for Degenerate Time Series with Application to Maneuvering Target Tracking Norman Owen Speakman,1985 Research was conducted in the general areas of time series analysis and stochastic realization Results were then applied to the specific problem of tracking a highly maneuverable aircraft target An algorithm was developed to identify the order and parameters of the minimum autoregressive moving average ARMA model of a multi variable system given the output autocorrelation sequence Studies were also conducted in the area of degenerate time series modeling It was found that degeneracy in vector valued time series is caused by the presence of one or more deterministic relationships in the time series ARMA models for degenerate time series can be identified by finding and extracting the deterministic relationships from the time series The result is a reduced dimension atochastic model of the system The model found will have fewer white noise inputs than outputs An AR **On the Order Determination of ARMA Models by Frequency Domain Considerations** James Dennis Brownlow,1980 **Automatic Autocorrelation and Spectral Analysis** Petrus M.T. Stochasticity, Nonlinearity and Forecasting of Streamflow Processes Wen Wang,2006 Streamflow forecasting is of great importance to water resources management and flood defense On the other hand a better understanding of the streamflow process is fundamental for improving the skill of streamflow forecasting The methods for forecasting streamflows may fall into two general classes process driven methods and data driven methods Equivalently methods for understanding streamflow processes may also be broken into two categories physically based methods and mathematically based methods This thesis focuses on using mathematically based methods to analyze stochasticity and nonlinearity of streamflow processes based on univariate historic streamflow records and presents data driven models that are also mainly based on univariate streamflow time series Six streamflow processes of five rivers in different geological regions are investigated for stochasticity and nonlinearity at several characteristic timescales
