The Evolution of Earth's Climate J. O. Robertson, G. V. Chilingar, O. G. Sorokhtin, N. O. Sorokhtin, W. Long, 2018-06-01 Written by a group of the most experienced and well known environmental engineers in the world from a unique perspective this volume explores the hot button issue of climate change its causes and the future of the planet Climate change is one of the most controversial and argued issues in the world today and it has been for years It has been politicized by politicians on all sides some scientists have used the study of it for their own material gain above true scientific discovery and some scientific theories surrounding it have been believed even though proven false But there is not by any means complete agreement among all scientists throughout the world on this issue Written by two of the world's most well respected environmental and petroleum engineers this book is meant to be one voice in the scientific literature on this important subject Other books also available from Wiley Scrivener take the opposite stance but it is important in our scientific journey to listen to all voices and rely on facts rather than opinions We trust the reader to make his or her decisions based on all of the facts and not just some of them

Global Warming and Global Cooling O.G. Sorokhtin, Leonid F. Khilyuk Ph.D., G.V. Chilingarian, 2007-08-24 The theory of the Earth's climate evolution based on universal chemical physical laws of matter energy transformation is presented in the book It shows how the process of Earth's core separation has led to formation and evolution of the hydrosphere and atmosphere Having analyzed the processes of heat transfer in the atmosphere the writers developed the adiabatic theory of the greenhouse effect which was applied for analysis of climatic changes on the Earth The influence of changes in climate on formation of mineral deposits and development of life on Earth was considered and presented based on modeling of typical climatic regimes It shows that the anthropogenic effect on the Earth's global temperature is negligible in comparison with the effect of global forces of nature Presents the theory of Earth's evolution based on the laws of chemical density differentiation of the origin of the Earth Discusses the adiabatic theory of the greenhouse effect with quantitative estimates of the natural and anthropogenic influences on Earth's climates Describes the quantitative description of the evolution of the Earth's climate throughout geologic history and prediction of the future of the Earth's climate Investigates the global forces of nature driving the Earth's climate

Earth's Climate William F. Ruddiman, 2008 Earth's Climate summarises the major lessons to be learned from 550 million years of climate changes as a way of evaluating the climatological impact on and by humans in this century The book also looks ahead to possible effects during the next several centuries of fossil fuel use
